## Career Objectives

To give effective and efficient efforts towards attaining organizational goals by exploring a wide scope of knowledge and intelligence. To work in an environmentthat provides a challenging and rewarding career ensuring high-level job satisfaction.
In the process apart from benefiting my employer, I also expect to learn for my overall development.

## Technical skill:

- Having Good experience in **Amazon Web Service** (AWS), environmentand good knowledge of AWS services like Elastic Compute Cloud(Ec2),Elastic Load Balancers(EBL), Auto scaling group(ASG), IAM, S3, Cloud Front, RDS, VPC, Route53, Cloud watch, AWS code pipeline
- Hands-on Experience with DevOps tools like **Git, Jenkins, Docker,Docker-compose, Docker Swarm**, **Kubernetes**, **Ansible, and Terraform**.
- Good knowledge of **Linux** Administration.
- Creating **EC2** Instances and configuring all necessary services.
- Maintaining **IAM** policies for organizations in AWS to create users,groups, and defined rules for role-based access to AWS resources.
- Created physical infrastructure by using **VPC** services.
  Implementation of **NAT** gateways for web apps hosted in private subnets
- Attaching or Detaching **EBS** volume to AWS EC2 instance & Knowledgeof how to configure and manage **s3 bucket**

- Hands-on work in creating **AWS code pipeline &code deployment,AWS EKS, AWS API & lambda**

- Knowledge of **Python, HTML, CSS & Shell script.**

## DevOps Technologies:

Jenkins, Docker, GIT, Kubernetes, Ansible, Terraform, Prometheus, Grafana

## OS Platform:

Linux, windows.

## Projects:

- Creating an application using AWS cloud within the registered domain. Various services like EC2,S3, ELB, Route53, RDS, Database, and ACM are implemented according to the Infrastructure.

- Installing nodejs & creating Angular app & reactjs & containerizing by Docker file, building the code from AWS code pipeline & deploying to s3 bucket, and integrating with Cloud front.

- Creating Python flask containerizing the Python code by Docker file & by using Jenkins, building the image & deploying to the Docker hub registry.

- Initializing Docker swarm cluster creating service in the cluster by Docker stack using Docker-compose yml file, and monitoring the Docker services by premethos & grafana node-exporter, c advisor & configuring the history of data in Redis,

- Creating Docker image for API & Implementing EKS cluster & creating deployment yaml services by Kubernetes **YAML** file & deploying using Terraform.

- Creating API & aws lambda & integrating & deploying the rest API gateway by terraform

- Creating EC2 and target groups attaching the EC2 target to the application load balancer within the Custom VPC network by using terraform code.

- Creating a Docker container from the Jenkins pipeline & deploying the Docker image to ECR & building the Docker container from the Docker-compose yaml file in the declarative pipeline.

## Training program:

Completed four months of training on AWS cloud and DevOps tools.
6 months internship in Sarvatman InfoTech technologies as a DevOps trainee.

## Declaration:

I hereby declare that the above-mentioned information is true to the best ofmy knowledge and belief.
