SUMANNAZ

Bengaluru,India-560032| 8310818119

Sumannaz3021@gmail.com | www.linkedin.com/in/sumannaz3021

Summary

Certified with data science, passionate about leveraging data analysis and machine learning techniques to solve real-world problems, skillful in python and sql, with hands-on experience in data manipulation, statistical analysis and data visualization through projects and internship. Strong problem solving skill and quick learner eager to contribute to a dynamic data science team.

Experince

jan 2024 – july 2024

Data science intern, **AI Variant**

It includes data cleaning and preparation, data analysis, model building, data visualization

Internship Projects

1. **Book Recommend System**

A book recommend system is a type of information filtering technology that seeks to provide users with personalized book suggestion based on their reading preferences and interest. The goal of the project is to develop a system that can analyze user is likely to enjoy.

Technologies: Python, Scikit-learn, Flask, MongoDB

Responsibilities:

- Designed and implemented collaborative filtering algorithms to suggest books based on user preferences.
- Integrated the recommendation engine with a web interface using Flask, allowing users to receive real-time suggestions.
- Conducted data preprocessing and feature engineering on a dataset of books,ratings and user interactions.
- Evaluated the system's performance using metrics such as precision, recall, and F1-score, achieving a [85]% improvement in recommendation accuracy.

2. **Sentimental Analysis**

Also known as Opinion mining, is a natural language processing technique used to determine the emotional tone or attitude convey by a piece of text, such as a review, tweet or comment. The goal of the project is to develop a system that can automatically analyze text data and classify it as positive, negative or netural.

Technologies: Python, NLTK, Scikit-learn, Matplotlib, Jupyter Notebook

Responsibilities:

- Designed and implemented a sentiment analysis pipeline using machine learning techniques, including Logistic Regression and Support Vector Machines.
- Preprocessed data by tokenizing, stemming, and removing stop words from a dataset of [number] customer reviews.
- Achieved an accuracy of [80]% in sentiment classification, with a precision of [79]% and recall of [98]% for positive and negative sentiment classes.

- Created visualizations to display sentiment trends over time and generate reports for stakeholders.
- Developed a Flask-based web application to allow users to input and analyze text sentiment in real-time.

Impact:

- Provided actionable insights that helped improve customer service strategies and marketing efforts, leading to a [95]% increase in customer satisfaction.

Education

Aug 2017

Master of computer application(mca), **THE OXFROD COLLEGE OF ENGINEERING**

july 2014

Bachelor of computer appliaction(bca), ST.FRANCIS DE SALES COLLEGE

Technical Skills

3. Data analysis
4. Sql
5. Machine learning
6. Deep learning
7. Excel
8. Data visualization
9. Tabalue
10. Seaborn

Technical Languages

- Python
- php
- Html
- C proramming
- Java

Certificates

Data science , **EXCLER SOLUTIONS IN 2024**

java/j2ee , **IMPACT SOLUTIONS IN 2017**

CCNA , **KOENIG IN 2016**
