SUMMARY

Working professional as a Senior Software Engineer with 5 years of experience inclusive 4 years in planning, building and preserving bots which streamline business processes within Oil and Gas domain using RPA UiPath.
Solid understanding of code development, root cause analysis, enhancements, quick bug fixing, Studio and Orchestrator environment.
Eager and passionate employee seeking to kickstart a dynamic career as an RPA Developer.

SKILLS

- UiPath 2018 & 2021
- TFS and Github
- Azure DevOps
- SAP 5.5 and 5.7
- Agile Framework
- On-premise and Azure VMs
- ServiceNow
- Jira
- Basics of HTML, C, Java and SQL
- AI & Gen AI Basics
- Quick Bug Fixing
- Good in Communication

EXPERIENCE

HCLTech, Noida

Senior RPA Developer **2020 - Current**

- Experienced in building RPA solutions using UiPath for 4 years.
- Developed 5 end-to-end automation processes using Agile framework.
- Communicated with business users in identifying feasibility of automation, requirement gathering and business exceptions.
- Documented several PDDs and SDDs as per business requirement.
- Good understanding of UiPath Orchestrator in deployment, monitoring and managing of Robots.
- Successfully migrated numerous bots from 2018 to 2021 version of UiPath, TFS to Github, On-Prem to Azure servers & 5.5 to 5.7 version of SAP.
- Implemented different approaches in fixing selectors from UI Explorer.
- Good knowledge on RE-Framework, queues, dispatcher and performer.
- Good exposure in Excel, SAP, Queues, Outlook, database and web automation.
- Basics of Document Understanding.
- Used Data Scrapping for extracting structured data from web apps or CSV and Excel files.
- Handled business and application exceptions with try catch, justified log levels and informative log messages.
- Adapted and worked with Agile methodology.
- Good and quick understanding of RCA
- Lead the team to ensure the deliverables are smoothly achieved on time.
- Efficiently troubleshot various bugs and enhanced code for better performance.
- Worked with onsite SMEs for handing over live production bots.
- Fixed unstable codes after Azure and SAP migration.
- Deployed process automations from development to Production environment.
- Directly connected with multiple business users for approvals on code enhancements and proposed improvements.

EDUCATION

MBA (Business Analytics), Symbiosis Pune

- Pursued Bachelor of Science in the field of Computing and Designing (2020-2023) from BITS Pilani (Work Integrated Learning Program).
- Pursuing in Master of Business Administration in Business Analytics from Symbiosis School for Online and Digital Learning (2024-2026).

PROJECTS

- **Spend Monitoring Tool** - Built the process where bot will extract the information from SAP using required transaction code in Excel file. Moving forward, populate the data with date filters, cell color and calculate additional column values based on the requirement. Furthermore, organized the data with necessary columns and update the values in template placed on business LAN in different sheets as per business criteria. Once done, draft the email to business with the attachment of final report.

- **File Migration** - Created a bot where it will move both files (word documents and pdf) by navigating through year, month and day sub folders and placed those files on different location with same structure of sub-folders. All the files have unique item ID, bot will extract it and save the file by the name of extracted Id and sent process completion email.

- **CV Selection bot using AI** - Developed a bot integrated with OpenAI. Initially, it will read all Resumes placed in the folder and convert them to .pdf files if not in the pdf format already. Read the file and send the content to OpenAI to know candidate's experience, qualification, email Id and if he holds certification or not. After data is collected, bot will update excel based on organization's criteria and send emails to all selected candidates. One consolidated email will be sent to the HR on updated excel sheet.
