Git

Kubernetes

EXPERIENCE

From JUNE-2019 Till JULY-2022 — **'Engineer' @ Shyam Ferro Alloys Ltd.**

- Conducted AOD panel operations to control metallurgical processes.
- Prepared charging materials for Argon Oxygen Decarburization processes.
- Supervised pan casting of hot metal, ensuring safety and quality standards.
- Monitored and maintained equipment for efficient production.

INTERNSHIP

Sept-Oct 2024 — **'DevOps Trainee' @ Bijak (Gurugram)**

- Configured VPN via SSH tunnel for AWS RDS access.
- Varify then submits billings for accounts under the AWS organization.
- Learned about the services used and shared feedback on cost optimization.
- Created and Monitored AWS cloudwatch Alarms for various services.

PROJECTS

AWS IaC using Terraform:

- Defined VPC with CIDR block and two subnets within two Availability Zones.
- Configured ALB in public subnet with specific port security group.
- Created S3 bucket with access control settings.
- Public subnet routed to internet, private to NAT gateway.
- Ran Terraform scripts to automate defined resource creation in AWS.

Services used: AWS, LINUX & TERRAFORM

Hosted static website on S3:

- Created an S3 bucket with all the website content.
- Configured the bucket for website hosting in AWS Management Console.
- Added a bucket policy that makes bucket content publicly available.
- Upload files, set permissions and accessed it using the endpoint URL.

Services used: EC2 & S3

Weather Tracking Website:

- Developed user interface using HTML, CSS and JavaScript.
- Integrate OpenWeatherMap API to get real-time weather information.
- Deployed website on an Amazon Elastic Compute Cloud instance.
- Set up Nginx as a web server and CloudFront as a CDN.

Services used: AWS, LINUX, NGINX & OpenWeatherMap API
