AWS DEVOPS ENGINEER

PRAVEEN P V
praveenvenkat1024@gmail.com
+ 91- 9445454396

Summary:

- **3** Years of strong experience Working as **AWS CLOUD SUPPORT Engineer** at **AVEVA Solutions** Since JANUARY 2022, for the operation of all AVEVA cloud solutions with the goal of achieving and maintaining a minimum monthly service availability SLA of 99.95%. My expertise lies in providing comprehensive support for cloud-based applications, ensuring the availability, performance, and security of AWS environments.
- Proficient in monitoring cloud infrastructure using **Amazon CloudWatch**, diagnosing issues and responding to incidents in a timely manner. Integrated **AWS services** with **Slack** for real-time notifications and **Jira** for issue tracking, ensuring seamless communication and issue resolution.
- I have actively worked with various AWS tools and services while collaborating with cross-functional teams to resolve issues efficiently.
- Participated in on-call rotations and escalated incidents based on predefined policies and ensuring 24/7 availability and timely resolution of critical issues.
- Always eager to keep up-to-date with the latest AWS features and industry best practices, enhancing support capabilities.
- Strong problem-solving skills combined with a deep understanding of cloud security, cost optimization, and system monitoring.

TECHNICAL SKILLS:

- **Cloud Platforms** : AWS (EC2, S3, RDS, Lambda, VPC, IAM, Route 53, ELB& ASG, CloudFormation, CloudWatch, ELB, SNS, SQS, CloudTrail, EFS, EBS, CloudFront,)
- **Virtualization** :EC2, AWS Lambda, Auto Scaling, Elastic Load Balancer (ELB)
- **Database & Storage** : Amazon RDS , DynamoDB, EBS , S3
- **Networking &Security** : VPC, Load balancers , IAM
- **DEVOPS &CI/CDTOOLS** : Jenkins, Docker, Kubernetes, Terraform ,
- **VERSION CONTROL** : Git, GitHub
- **Containerization & Orchestration** **:** Docker, Kubernetes (EKS), AWS ECS (Elastic Container Service)
- **Infrastructure as a CODE** : Terraform, CloudFormation
- **Monitoring & Logging** **:** AWS CloudWatch, AWS CloudTrail,
- **OS & Scripting** **:** Linux & shell Scripting
- **Collaboration & Communication Tools** **:** Slack , JIRA , Confluence

Education:

Degree: P S V College of Engineering & Technology Bachelor of Engineering (ECE) 2017-2021

PROFESSIONAL EXPERIENCE:

AVEVA's Cloud DevOps (CDO) function is accountable for the operation of all AVEVA cloud solutions with the goal of achieving and maintaining a minimum monthly service availability.

We will lead a team of CDO Engineers to continually improve and develop AVEVA's Cloud solutions, including release and deployment processes and pipelines, enhancing, and supporting our monitoring capabilities, and diagnosing and resolving cloud infrastructure incidents to optimize uptime and allow us to scale through repeatable and standardized work practices.

Roles and Responsibilities:

- **AWS Services** for Incident Detection and Monitoring: **Amazon CloudWatch** is a powerful monitoring tool used to track AWS resource and application performance. It collects metrics, logs, and events from various AWS resources (like **EC2, Lambda, RDS,SNS , SQS , S3** etc.) and sets alarms for predefined thresholds (e.g., high CPU utilization, low disk space, etc.).
- Managed and supported **AWS services** ensuring optimal performance and availability of cloud applications.
- **Slack**: Used for real-time team communication, issue tracking, and notifications integration with AWS services and CI/CD pipelines.We operate a streamlined and effective incident management process that includes triaging, incident reporting, communications, and documentation using confluence. Integrated Slack with AWS Services.
- When an incident is detected (e.g., an EC2 instance failure or high CPU usage), an SNS notification can trigger a Slack message in a designated **incident response channel**, ensuring the support team is immediately alerted. Ensures the right people are notified immediately when an incident occurs, minimizing downtime
- **Jira**: Experienced in managing project workflows, tracking tickets, and ensuring timely delivery by adhering to SLAs; integrated with Slack for real-time updates. We can automatically update the Jira issue (e.g., "In Progress", "Resolved") based on incident resolution progress in AWS.
- **Confluence**: is used to document detailed incident reports, and lessons learned. After the incident is resolved, we create a Confluence page to record the incident's details.
- **Opsgenie:** We have integrated with **Slack** to provide real-time collaboration. When an incident is triggered, an Opsgenie alert can post directly into a **Slack channel**.
- Once the alert is received, we individual assigned the responsibility acknowledges the incident through Opsgenie. Acknowledgment is crucial as it indicates that the team is aware and is beginning the investigation. And we will be resolving service availability **SLA of 99.95%**
- As part of DevOps best practices, after an incident, We would collaborate with the team to create a report in **Confluence.** We update detailed the root cause of the incident, remediation steps, and preventive actions.
- Provide timely and effective responses to issues and trends to ensure that colleagues and customers (via **Global Customer Support)** are kept informed about incidents and resolution progress. using Status dash board notification **(SDBN) .**

Declaration:

All Information in this CV is true and correct to the best of my knowledge and belief.

Yours Truly
