Vamshi Mallavarapu **+91-9652660360 (Mobile)**

vamshiteja.vt05@gmail.com (Email)

Profile Summary

DevOps Engineer with 3+ years of experience in CI/CD, automation, and cloud infrastructure management. Proficient in AWS, Docker, Kubernetes, Jenkins, Ansible, and Terraform. Experienced in developing and automating CI/CD pipelines, deploying containerized applications, optimizing performance, and enhancing security

Skills

- CI/CD & Automation: Jenkins, AWS CodePipeline
- Cloud Technologies: AWS (EKS, EC2, VPC, S3, CloudFormation, CloudFront, IAM, ELB, Route53, AutoScaling, API Gateway, Lambda, Codepipelines, SNS, SES, WAF, EventBridge , DynamoDB, Athena)
- Containerization & Orchestration: Docker, Kubernetes
- Monitoring & Visualization: AWS CloudWatch, Grafana
- Infrastructure as Code (IaC): CloudFormation, Terraform
- Scripting & Automation: Shell Scripting, Groovy scripting
- Server Administration: Windows Server, Linux
- Configuration Management: Ansible

Work Experience

Skye Air Mobility Pvt.Ltd - Jr DevOps Engineer **2022 – Present**

Elric Soft Pvt.Ltd - Associate Software Engineer **2021 – 2022**

Projects

Operator Portal (Web Application)

- Deploy Node.js applications in Docker containers using AWS Code Pipeline and push images to ECR.
- Integrate SonarQube into CI/CD pipelines, helping us catch and fix around 85% of code quality issues before they reached production.
- Orchestrate containerized applications on AWS EKS to ensure scalability and high availability.

- Managed infrastructure with Terraform, achieving automated provisioning that reduced setup time.
- Configure S3 buckets, CloudFront distributions, and Route 53 for content delivery, achieving a 20% reduction in latency.
- Establish continuous monitoring using AWS CloudWatch and Grafana, resulting in a 50% improvement in incident detection time.

Skye UTM (Unmanned Traffic Management)

- Execute Angular application deployments to EC2 instances using AWS CodePipeline, ensuring efficient and reliable delivery.
- Automate Lambda, API deployments using AWS CodePipeline and CloudFormation SAM templates, reducing manual deployment efforts and errors by 80%.
- Create a private network with VPC to host EC2 instances securely, enhancing application security.
- Streamline configurations and infrastructure management using Ansible.
- Set up load balancing and AutoScaling, improving application availability to 99.9%.
- Implement AWS WAF (Web Application Firewall) to protect applications from web exploits and enhance security by filtering and monitoring HTTP requests

Cloud-Based Infrastructure Automation & Deployment

- Managed bit bucket repositories for branching, merging and release activities.
- Developed CI/CD pipelines with Jenkins to deploy applications to Apache Tomcat servers, improving deployment efficiency.
- Deployed applications using Maven standardizing the deployment process.
- Enhanced automation and orchestration of containerized applications using Docker and Kubernetes.
- Instituted configuration management and automation using Ansible.
- Implemented monitoring solutions with AWS CloudWatch, improving system visibility and response times.
- Configured VPCs, EC2 instances, managed Security Groups, and facilitated backups, ensuring system reliability and security.
- Enforced security best practices by conducting regular audits and implementing IAM policies with least privilege access, significantly improving overall system security posture and compliance.

Education

- Master of Computer Applications (MCA) - Ongoing
  Vignan's Foundation for Science, Technology & Research (2024-2026)
- Bachelor of Business Administration – 78%
  Ponnaiyah Ramajayam Institute of Science and Technology (2018-2021)
