PROFESSIONAL SUMMARY

I am a SQL/Snowflake developer with 2 years of experience in data analysis, visualization, and database management and skilled in using Common Table Expressions (CTEs) to streamline and optimize complex queries. I have solid experience working with SQL and Snowflake, coupled with a strong understanding of data analysis and visualization techniques. I am also well-versed in Python and Power BI. I aim to apply my expertise in a dynamic environment where data is the key to decision-making and innovation.

TECHNICAL SKILLS

- **Languages:** Python, SQL
- **Tools:** Excel, AWS (basics), Snowflake, Power BI, GitHub
- **Other skills:** Machine Learning (basics)

EDUCATION

B.Tech in Electronics and Communication Engineering — June 2018 – July 2022

Narula Institute of Technology, Kolkata, India. GPA: 8.28/10

Relevant subjects – Python, Machine Learning, C, Java

WORK EXPERIENCE

Programmer Analyst | Cognizant Technology Solutions — July 2022 – September 2024

- Trained on MySQL, SQL Server, ETL, MSBI, data warehousing, Power BI and basic concepts of Azure.
- Developed and analyzed SQL code in Snowflake for creating data models as part of the data visualization team.
- Developed a Python script to automate metadata insertion, resulting in a 50% reduction in processing time for creating and inserting new data from existing metadata.
- Deployed SQL views to GitHub, ensuring version control and project collaboration through Azure DevOps.
- Tracked and updated tickets on Azure DevOps.

PERSONAL PROJECTS

Machine Learning in Python – Final Project | Link — June 2024

- Developed as a comprehensive final project for a Coursera Machine Learning course, implementing key machine learning concepts and techniques using Python.
- Conducted data cleaning, transformation and normalization, and EDA to identify patterns, correlations and anomalies within the dataset.
- Built and fine tuned multiple ML models, including regression, classification and clustering models.
- Applied feature engineering to enhance model input quality, model performance and reduce overfitting.
- Assessed model accuracy, precision, recall and other metrics to determine effectiveness.
- Created visualizations with Matplotlib and Seaborn to illustrate model performance and dataset characteristics.

Power BI Report | Link — July 2022

- Created a dynamic Power BI report using DAX measures, slicers, and filters for a retail grocery chain.
- Improved reporting interactivity with custom calculated columns and dynamic filters.

Australia Rain Prediction | Link — June 2024

- Developed a machine learning model using logistic regression and neural networks to predict rainfall.
- Utilized Jupyter Notebooks for data analysis and model training
- Preprocessed large weather datasets and improved feature selection for better model accuracy.
- Achieved an 85.6% accuracy rate with logistic regression and 83.5% using neural networks.

CERTIFICATES

- Microsoft Certified: Azure Data Fundamentals | CERTIFICATE — February 2024
- Microsoft Certified: Power BI Data Analyst Associate| CERTIFICATE — June 2024
- Data Science Course - Complete Data Science Bootcamp | CERTIFICATE — June 2023
- Supervised Machine Learning: Regression and Classification — May 2024
- Neural Networks and Deep Learning — June 2024
