Sr no 53/58 Sainath Nagar,
Near mahadev tmple,
Wadgavsheri, Pune - 411014

SKILLS

- **Python/ML Packages:**
  NumPy, Pandas, Sci-py, Scikit-learn, Seaborn, Matplotlib, Flask, Github

- **Machine learning:**
  - Linear Regression,
  - Ridge & Lasso Regression,
  - Logistic Regression,
  - Naïve Bayes Classifier,
  - K Nearest Neighbor's Classifier,
  - Support Vector Machine,
  - Decision Tree,
  - Random Forest,
  - Gradient Descent,
  - Ada-Boost,
  - K-means Clustering.

- **Text Processing:**
  - NLTK, TF-IDF, Word2Vec, Bag of Words.

- **NLP**
- **Deep Learning**
- **MySQL**
- **MongoDB**

Education Background

- MBA | Gujrat University | 2020 | 9.1 CGPA
- Bachelor of Engineering
  Pune University | 2017 | 65 %
- Diploma | MSBTE
  Govt. Polytechnic, Arvi | 2014 | 75 %
- SSC
  Maharashtra State Board | 2011 | 85%

Personal Information

Dob: 18-04-1995
Languages: English, Hindi, Marathi
Marital Status: Unmarried

PROFESSIONAL PROFILE

An IT experience in historic data and apply statistical concepts to make predictions. I apply Predictive analytics using many techniques statistics, modelling, Machine Learning, and Deep Learning to analyse current data to make predictions about future.

PROFESSIONAL EXPERIENCE

- A professional with experience in Python, Data Science and Machine learning, Model Training & Hyperparameter tunning with expertise in Financial and Manufacturing domain projects.
- Able to investigate Data Visualization and summarization techniques conveying key findings.
- Experience diving into data to discover hidden patterns & modeling them using several Regression & Classification machine learning algorithms.
- Ability to write a clean and production code with Object Oriented Programming in Python.
- Languages: Python | Methodology: Agile | Project Tool: JIRA
  Operating Systems: Windows | Database: Relational & MySQL

Project Details

Data Scientist | Synechron Pune | 3.2 Years | Oct'20 to present

Project 1 : Data Driven Credit Risk Model **(Machine Learning)**
Domain : Finance
Description :

- A pioneer in digital banking, Axos Bank offers a comprehensive range of innovative financial products and services with the highest level of security. Our powerful web-based platform gives you streaming real- time data and one-click loan execution of the same essential capabilities featured in our desktop software.

Roles and Responsibilities:

- Understand, analyze, and interpret large datasets.
- Develop advanced programs to extract the data needed, prepare data for further analysis.
- Discover, design, and develop analytical methods to support novel approaches of data and information processing.
- Perform analysis to assess the quality of the data, determine the meaning of the data, and provide data facts and insights.

Project 2 : Metal Defects Detection (Steel Processing Industry) **(Deep Learning)**
Domain : Manufacturing
Description :

- To develop a **deep learning model** for the automatic classification of defects on metal surfaces. The model should be capable of accurately identifying and categorizing different types of defects.

Roles and Responsibilities:

- Work with stakeholders throughout the organization to identify opportunities for leveraging company data to drive business solutions.
- Search for ways to get new data sources and assess their accuracy.
- Assess the effectiveness of new data sources and data gathering techniques.
- Use predictive modelling to increase and optimize customer experiences, revenue generation, ad targeting and other business outcomes.
- Use Data Augumentation, CNN and ANN algorithms to classify data & prediction classes

Project 3 : Identify transfer avoidance calls and reason for each calls**(NLP).**
Domain : Telecom
Roles and Responsibility :

- Importing data from client database as per requirement. Perform various task on datasets which comes under EDA pipeline.
- Categorization and restructuration of data.
- NLTK library for preprocessing such as Lemmatization, stop-words removal, Applied different NLP algorithm & technique like Keyphrase extraction, cosine similarity, wordcloude to get key-phrases and different topic modeling techniques like RNN and LSTM to get categories of calls .
