

**Immediate Joiner**

**Objectives:**

Looking for a challenging QA role where my skill sets can be utilized & Proved, and I can see my Professional & personal growth with the technologies in the QA industry which are going to help My career as well as organization growth.

**Skill Summary:**

- Having **3 years** of good experience in the IT Industry with the following skillset.
- **Functional Testing**      **Integration Testing**      **Regression Testing**      **System Testing**
- **SDLC & STLC & RTM**      **Test Case Design**      **Test Case Execution**      **TC Reviews**
- **Bug Life Cycle**      **Azure DevOps**      **JIRA**      **Test Rail**
- **Rest API Testing**      **Postman**      **Soap API Testing**      **SoapUI tool**
- **Swagger**      **Agile-Scrum-Sprint**      **SQL**      **Mobile Testing**

**Functional Testing Experience:**

- **Having 3+** years of good experience in the **Functional Testing** technology
- Very good working knowledge of all the phases of **SDLC** and **STLC** cycles
- Very good experience in testing **Web Applications**
- Good Knowledge of **Black box** and **White box** testing types
- Performed different types of functional testing like **Smoke Testing, Functionality Testing, Integration Testing, System Testing, End- End Testing, Re-Testing, Regression Testing, Sanity Testing, Alpha Testing, Beta Testing, UAT Testing, Ad-hoc Testing, and Exploratory Testing**
- Working knowledge of non-functional testing like **User Interface (UI) Testing, Usability Testing, Compatibility Testing, and Basic Security Testing**
- Good in performing different levels of testing for the application like **Unit Testing, Integration Testing, System Testing, and Acceptance Testing**
- Good in **Understanding the requirements** and **analyzing the impact** on the application.
- Good in identifying the **Test Scenarios** and writing the **Test Cases** with effective **Test Steps**
- Good in applying the different **Test case design techniques (Black box Techniques)** like **Boundary Value Analysis (BVA), Equivalent Class Partitioning (ECP), Decision Table (DT), Error Guessing, and State Transition**
- Good in **Reviewing the peer's Test cases** and providing comments.
- Very good at preparing the **Requirement Traceability Matrix (RTM)** to ensure good **Test coverage**.
- Very good Working knowledge of **Executing Test Cases** and finding **Bugs**.
- Good at **Reporting Bugs** with all the required details
- Very good knowledge of **Requirement Life Cycle** and **Bug Life Cycle**
- Having good experience in testing the **Front-end** and **Back-end** applications
- Good at Performing the testing on the application by using **Top-Down and Bottom-Up approaches** with the help of **Stubs** and **Drivers**
- Knowledge of **Verification & Validation, Quality Assurance (QA) & Quality Control (QC), and Static & Dynamic Testing** concepts
- Knowledge about the **Burn Up** and **Burn Down** charts.
- Able to manage pressurized situations and able to produce the best results.
- Ability to work in a team (Team member) and as an **Individual contributor** as well.

**Mobile Applications Testing Experience:**

- Good working knowledge of testing Android mobile applications by using '.apk' files.
- Good at performing different types of scenarios like Installation, Interruption, Network throttling, System Reliability, and Usability Testing

### **Agile – Scrum Working Experience:**

- Good working knowledge of **Agile** Methodology by following the **SCRUM** framework.
- Good working knowledge of **Sprint** Methodology
- Involved in the different **Sprint Ceremonies** like **Sprint Planning, Sprint Grooming, Scrum Meetings, Sprint Reviews, Sprint Demos, and Sprint Retrospective**
- Good at **providing the estimates** for the backlog items using the **Story Point** concept following the **Fibonacci series** logic.
- Involved in the **Product Backlog Refinement sessions**.
- Frequently used the terms **Product Backlog, Sprint Backlog, Sprint Spillover, and Sprint Delays**

### **DB Testing Experience:**

- Good at writing queries by using DML Commands like Insert, Select, Update, and Delete commands.
- Good at writing queries by using Aggregate functions like Count(), Sum(), Avg(), Min(), and Max().
- Basic knowledge of Joins concepts, Group by, and Having clause.

### **API Testing Experience:**

- Good knowledge of testing the **REST APIs** by using the **POSTMAN** tool
- Good working knowledge of different HTTP methods like **POST, GET, PUT, PATCH, and DELETE**
- Good knowledge of different **HTTP status codes** like **2XX, 4XX, and 5XX series**
- Good in using the different levels of variables like **Local, Environment, Collection, and Global**
- Good at running the APIs in **Different Environments**
- Good at running the **API Collections** by inputting the **External Data** through CSV files.
- Good at adding the **Assertions** under the **Test tab** to validate the API response.
- Good working knowledge of running the **SOAP APIs** by using the **SOAP UI** tool.
- Good working knowledge of **XML** formats for **SOAP APIs**
- Good working knowledge of **JSON** and **GraphQL** formats for REST APIs

### **Experience:**

- Working as a **Software Test Analyst** in – **WIPRO**, Since Jun - 2020.

### **Education:**

- Completed Master of Computer Application with an aggregate of 7.5 **CGPA** from **Dr. A. P. J. Abdul Kalam Technical University, Lucknow**.

### **Projects Summary:**

#### **Project 3: RICARDO - E Commerce Domain**

URL: <https://www.ricardo.ch/en/>  
Role: Software Test Analyst  
Duration: Dec 2022 – till now  
Tools: JIR, POSTMAN, SOAP UI

#### **Description:**

This project is a Switzerland-based website that allows users to sell and purchase different categories of products. Users can search for the desired product from the list of categories like 'Clothing & accessories', 'Vehicles', 'Household & home furnishings', 'Sports', 'Manual work & gardening' etc., and add them to the cart. Once the user goes for checkout, they can enter shipping and billing address details, select the payment, and place the order. Users can track their orders, cancel them, and return them.

**Project 2:** **BETTER.COM – FinTech - Banking**  
URL: <https://better.com/>  
Role: Software Test Engineer  
Duration: Mar 2021 – Nov 2022  
Tools: Azure DevOps, POSTMAN, SOAP UI

**Description:**

The Better.com site is a USA-based Banking – Wealth care application that provides services like Buy or Sell Properties, Refinance the property, and HELOC loans provider. Customers can search for an Agent also to help them with this process. Customers can select the buy or sell option they can search for the location, can select the type of home and purpose of staying and get a quote first and go for finalization at last.

**Project 1:** **MYCHART – Health Care**  
URL: <https://www.mychart.org/>  
Role: Software Test Engineer  
Duration: Jun 2020 – Feb 2021  
Tools: JIRA & TEST RAIL

**Description:**

My Chart is a UK-based healthcare application that provides different options for the users like 'Connecting and Sharing, Health charts, Messaging doctors, Scheduling appointments, Payment and Insurance, etc. Users can search for the doctor based on the disease and they can choose the doctor and schedule the appointment. The application will track all the user's level data like regular reports, check-ups, medicine reminders, etc.

**Roles & Responsibilities:**

- Participating in the Sprint planning meeting and knowing the sprint scope.
- Understanding the Sprint backlog items assigned to me and coming up with queries.
- Get the clarifications of queries and prepare test scenarios.
- Converting test scenarios into test cases and implementing them in full format.
- Sending the test cases for lead review and incorporating the comments if any from the lead.
- Updating the test cases when we get any changes to the existing requirements.
- Starting the test case execution part, once Story changes are available in the QA environment.
- Logging the defects when there are deviations between expected vs actual.
- Involving the defect triage calls and tracking every bug till closure.
- Sending daily status reports to leads with the following data.
  - How many test cases were written/executed/passed/failed/blocked?
  - How many bugs were raised?
- Providing the full sign-off on the stories which do not contain any bugs.
- Identifying the Regression Cases at each feature level in each Release.
- Executing the System Level Regression Cases before going to the Release.
- Performing sanity checks on UAT and PROD environments.
- Supporting all the Release Level Activities
- Getting the API details from the SWAGGER and executing them in the POSTMAN tool.
