WORK EXPERIENCE

Automation Test Engineer, WIPRO Ltd.,
June 2021 - Present

Client Worked : FORD Motors

Project Title: SWUM (Software Update and Management)

Roles and responsibilities:

- Highly efficient in the root cause analysis and debugging the issues
- Generated ideas for automated test procedures by analysing client requirements and team features.
- Established comprehensive internal wiki: Developed a centralised resource documenting team efforts and providing guidelines
- Developed and executed automated test scripts using industry-leading frameworks such as Selenium in PyCharm and IntelliJ
- Active contributor to GitHub repositories: Consistently submitted and got merged numerous Pull Requests in Source and Destination Repositories of the project.
- Analysed logs and test results to investigate errors in software or code, highlighting the causes to help developers create fixes.
- Collaborated with cross-functional teams to define testing requirements, identify test scenarios, and prioritise test cases for automation
- Delivered the promising fixes for the bugs.
- Well versed in JIRA, Jenkins and GitHub for enhancing, tracking and solving various problems
- Played a proactive role in organising engaging events at the account level, fostering a sense of camaraderie among team members, and facilitating official account connects.

Automation Script Portfolio:

- Automated the downgrade app validation process from multiple data sources which significantly reduced the manual efforts and errors.
- Efficient daily status reporting: Automated team-wide updates, saving time and minimising errors
- Seamless Data Collection: Automated data extraction of specific information from file lists, streamlining manual efforts
