PROFESSIONAL SUMMARY

- Detail-oriented aspiring Data Analyst with a solid foundation in **statistical analysis, data visualization, and data-driven decision-making**.
- Proficient in utilizing tools such as **Python, SQL** and **R** along with data visualization software such as **Tableau** and frameworks like **Apache Spark** and **Apache Hadoop** to extract insights from diverse datasets.
- Motivated to apply academic expertise in **data pipeline management, dashboard development, and decision support** driving business growth.

EDUCATION

Institute For Advanced Computing and Software Development - CDAC	Pune, MH
<i>PG - Diploma in Big Data Analytics</i>	<i>Mar 24 - Aug 24</i>
Sandip Institute of Engineering and Management	Nashik, MH
<i>Bachelor of Computer Engineering (73%)</i>	<i>Aug 19 - May 23</i>
Agasti Arts, Science & Commerce College	Akole, MH
<i>12th Science (52%)</i>	<i>Jul 18 - Mar 19</i>
Agasti Vidyalaya	Akole, MH
<i>10th (82.2%)</i>	<i>Apr 07 - Mar 17</i>

TECHNICAL SKILLS

Programming Languages: Python, SQL, MongoDB, Java.

Tools & Libraries: Apache Spark, Hadoop, Scikit-learn, Pandas, TensorFlow, XGBoost, Numpy, Git.

Data Analytics: Statistical Analysis, Big Data Technologies, ETL Processes.

Visualization Tools: Tableau, Plotly, Seaborn, Matplotlib.

WORK EXPERIENCE

Internship

- STSARC (Sahajananda Tech Services and Research Centre Private Limited) July 23 - Dec 23
- Collaborate on data-driven projects, analyzing and interpreting complex datasets to inform business decisions.
 - Utilize statistical methods, data visualization, and machine learning models for trend analysis and predictive insights.
 - Engage in data cleaning, preprocessing, and exploration using tools like Python, SQL.

PROJECTS

- Online Financial Fraud Detection**, Developed an advanced online financial fraud detection system by combining Random Forest and Logistic Regression for a multi-model approach to classification. Leveraged DBSCAN for detecting outliers and identifying fraudulent transactions in large datasets. Focused on feature engineering and model optimization to enhance detection accuracy. [https://github.com/Abhaynaikwadi/Online_Payment_Fraud_Detection]
- IPL Data Analysis**, Developed an IPL data analysis pipeline[ETL] using AWS S3, Databricks, and PySpark. The project involved storing large datasets in S3 buckets, where data was ingested into Databricks for processing and analysis using PySpark. Leveraged PySpark for distributed data processing and executed complex queries .
