SKILLS

Programming Languages - Python, R, MySQL, SAS

Packages - Pandas, Scikit-learn, Keras, PyTorch, RShiny

Tools - Machine Learning, Statistics, Predictive Modelling, Unsupervised Learning, Deep Learning

WORK EXPERIENCE

KRTRIMAIQ COGNITIVE SOLUTIONS | Bangalore, India | Lead AI/ML Engineer June, 2024 – Present

FASE (FDA Search and Support Engine) - Working on a product designed to help users working on clinical trials for new drug development by creating the official FDA protocol for the trial based on the trials specific parameter and content from historical protocols that are identical or similar to the new trial that the user is working on.

The solutions uses fine tuned versions of large language models such as gpt-4o and gpt-4o-mini to generate new content by paraphrasing existing content and replacing user specific details wherever necessary.

The model is finetuned beforehand using the content from all historical protocols in the form of user and assistant content pairs.

Search Engine - Another vertical of FASE is a FDA Search engine that provides users with the most relevant and accurate source of information on clinical trials and drug approvals related to FDA US.

It is a RAG based system where we extract and store all required FDA protocols and documents in a customized RAG architecture iteratively designed and improved to tackle some of the issues related to information retrieval and content generation.

Rstack Solutions | Bangalore, India | Senior AI/ML Engineer May, 2023 – May, 2024

ARBot - We have developed an AI solution to automatically navigate the IVR menus of Insurance payers to increase the efficiency of obtaining claim status as agents don't have to spend time on navigating ivr menus and can directly talk to the payer agent once call is transferred. This saves the time agents have to spend on navigating the IVR menu. We have implemented a RAG (Retrieval Augmented Generation) enabled large language model (llama2 7B) which can determine the appropriate response to IVR inputs based on the reason for making the call. RAG provides the llm with a lot of examples of appropriate input response pairs which are stored in a vector database which can be accessed while making real time inference.

Hirexa Solutions | Bangalore, India | Data Scientist May, 2022 – Aug, 2022

Worked on developing an automated pipeline to create reports based on clinical research for a pharma company. The solution was implemented using R language and Rstudio.

WorldData | Austin, US | Senior Data Scientist Aug, 2021 – April, 2022

Fuel Technology - Developed an algorithm to detect Product Quality Issues in Gas Stations across US arising due to blending of branded and non-branded fuel. The algorithm makes use of point of sales data from Gas stations and purchase data at manufacturer level to flag stations involved in blending. The algorithm is implemented in Python and Spark and based on statistical models that study distributions in purchase and sales data to detect anomalies that point towards abnormal behavior.

Ismile Technologies | Chicago, United States | Data Science Intern Sep, 2020 – Dec, 2020

Created clusters to categorise users of an online dating app and wrote an algorithm to calculate compatibility score between those users with an aim to increase user engagement on the app.

Mercedes Benz R&D | Bangalore, India | Data Scientist May, 2018 – July, 2019

Data Analytics for Autonomous Driving - Critical Scenario Mining and Automatic Assessment of events for validation of autonomous vehicles using Machine Learning and Predictive Modelling.

- Created a framework for distributed training of deep neural networks on a MapR cluster containing several GPU nodes. Used synchronous training and data parallelisation techniques to achieve maximum optimization.
- Built a model to predict whether the collision warnings released by the vehicles was a false warning or not.

Bang The Table | Bangalore, India | Data Analyst

Jan, 2017 – April, 2018

Provide Business Intelligence to Product/Sales Managers in the form of product usage metrics and business insights.

- Built client churn models in python to target customers with a high probability of leaving our service.
- Created dashboards in BIME Analytics to display metrics like user traffic, user activity and tool usage of websites.

Capgemini | Bangalore, India | Data Scientist

Jun, 2015 - Dec, 2016

Worked on several projects in domains like Text Analytics, Predictive Modelling, Flight Data Analytics and Data Engineering for different clients as part of the Data Science and Analytics team.

- Trained prediction models in python to automatically categorise incoming customer complaints for a client using historical data so that issues could be resolved more efficiently.
- Built Linear Regression models in R explaining how total fuel consumption of a flight depends on various Pilot controlled and environment variables to help increase fuel efficiency of flights.

EDUCATION

The University of Texas at Dallas

May, 2021

M.S., Business Analytics

Indian Institute of Technology, Kharagpur

May, 2015

B.Tech, Metallurgical and Materials Engineering

RELEVANT COURSES

Advanced Business Analytics with R | Graduate Statistics | Database Foundations | Machine Learning by Andrew NG
 Applied Machine Learning | Programming for Data Science using Python | Big Data | Prescriptive Analytics
 Deep Learning Specialisation by Andrew NG | Applied Natural Language Processing | Predictive Modelling using SAS

COMPETITIONS, LEADERSHIP & ORGANIZATIONS

HJB Hall, IIT Kharagpur – General Secretary, Sports and Games

Aug, 2013 - May, 2014

Mercedes Benz - ABCD Award, Above and Beyond the Call of Duty Award

Nov, 2018

University of Texas at Dallas - Dean's Excellence Scholarship

Jun, 2019
