Objective

Dynamic and results-oriented Data Scientist with expertise in advanced data driven computing & predictive modelling with a strong foundation in mathematics and computing. Proven track record of leveraging AI applications to deliver innovative solutions and drive significant financial impact across strategic client initiatives. Skilled in **Python, PySpark, TensorFlow, SQL** translating complex data into actionable insights to drive revenue growth and operational efficiency. Recognized for spearheading analytical teams, resulting in substantial cost savings, & user experience enhancements for global clients.

Experience

Research Intern | Neo Research Consulting Pvt Ltd, Gurugram Oct 2023 - Jan 2024

- **Data Preprocessing:** Conducted extensive data cleaning, transformation, and outlier detection to ensure high-quality datasets for machine learning models in the health and real estate sectors.
- **Model Development:** Developed predictive models using Python for health risk assessments and real estate price forecasting, optimizing algorithms like Linear Regression, Decision Trees, and XGBoost.
- **Model Validation:** Implemented cross-validation techniques to evaluate model performance, ensuring robust and accurate predictions by tuning hyperparameters and using appropriate evaluation metrics.

Data Science Intern | PW Skills Apr 2024 - Jul 2024

- Working on a **credit card default prediction project** implementing modular coding techniques.
- Conducting thorough **data cleaning** and **preprocessing** of transaction datasets, including **handling missing values** and **encoding categorical** variables, to ensure high-quality input for model training.
- **Developed Predictive Models:** Built and optimized machine learning models, **including XGBoost and Gaussian Naive Bayes**, to predict credit card defaults with an **accuracy of 82.03%**.

Projects

Vision-Based Smart Attendance System| *REC ABN* [Project Link](#)

- Developed a deep learning-based face recognition model for real-time attendance tracking in classroom settings, replacing traditional methods.
- Deployed the system using **OpenCV for live video processing**, ensuring fast and accurate **face detection and recognition**.
- Successfully implemented the system in a **college council**, improving attendance management efficiency and reducing human error in record-keeping

Electricity Usage Forecasting Using LSTM [Project Link](#)

- Develop a time-series forecasting model to predict future electricity consumption patterns for optimizing power grid management and demand response strategies.
- Leveraged historical power usage data from households and industries to predict future usage spikes and reduce potential outages
- Achieved high accuracy by fine-tuning hyperparameters, employing multiple LSTM layers, and optimizing the model with sliding window techniques for multi-step forecasts.

Credit Card Default Prediction | *PW SKILLS* [Project Link](#)

- Predict customer credit card defaults to assist financial institutions in minimizing risk and improving credit decision-making.
- Applied XGBoost and Gaussian Naive Bayes to predict the likelihood of credit card defaults based on customer transaction histories, achieving an accuracy of 82.03%.
- Developed a Flask-based web application that allows banks to make real-time predictions of default risks, aiding in risk assessment and loan approval processes.

Text Summarizer using Transformer Model | *PW SKILLS* [Project Link](#)

- Build an automatic text summarization tool using **Transformer models** for extracting key information from large documents.
- Developed a Transformer-based summarizer that efficiently **condenses lengthy** texts while preserving essential information, improving readability and saving time.
- Real-life use cases include **summarizing research papers, legal documents, and news articles**, aiding professionals in quickly grasping the main ideas of extensive content.

Skills

Programming Languages: Python, SQL, Flask, OOP, JavaScript, HTML, CSS, C

Data Science & Machine Learning: Time-Series Analysis, Predictive Modeling, Feature Engineering, XGBoost

Deep Learning: ANN, CNN, Keras, TensorFlow

Natural Language Processing: NLTK, Tokenization, SpaCy, RNN, LSTM

Data Manipulation & Analysis: Pandas, NumPy, Scipy

Data Visualization: Power BI, Matplotlib, Seaborn, Bokeh

Mathematics: Linear Algebra, Calculus, Probability, Statistics

Other Tools: Git, Jupyter, VS Code

Education

Rajkiya Engineering College, Ambedkar Nagar Nov2021-Jun 2025
B-Tech, Information Technology
Courses: Data Structures & Algorithms, C, Operating Systems, Database Management Systems (DBMS)

Certifications

- **Introduction to Data Science, Infosys** Sep-2024
- **Data Science Master, PW Skills** Mar-2024
- **Machine Learning, Internshala** Dec-2022
- **Power-BI, PW Skills** Mar-2024

Extracurricular Activities

- Cricket lover
- Playing the keyboard
