abhi912700@gmail.com

Experienced Software Tester with 3.2 years in web and mobile app testing, skilled in manual and automation testing, SDLC, STLC, GUI testing, usability testing, functional testing, API testing, regression testing, and test automation using Eclipse.

Core Competencies

- Automation Testing
- Manual Testing
- Regression Testing
- Smoke Testing
- GUI Testing
- Mobile Testing
- Web Application Testing
- Functional Testing
- Retesting
- Bug Reporting
- API Testing
- Database Testing
- Bug Life Cycle
- Test Case Execution
- Test Planning
- Test Case Creation

Technical Skills

- Java
- Selenium
- JIRA
- Postman API
- JMeter
- Maven
- SQL
- Testng
- Cucumber
- Rest Assured

Profile Summary

- Having 3.2 years of experience in testing web and mobile applications, plugins/extensions as a Software Tester (Manual and Automation).
- Have a good experience with SDLC, STLC and defect life cycle.
- Have good experience in test case execution.
- Utilize Rest Assured to send HTTP requests (GET, POST, PUT, DELETE, etc.) to the API endpoints being tested.
- Expertise in test automation using Eclipse, Core Java, Selenium Web Driver, and Cucumber.
- Have a good understanding of QA principles, QA process, test plans.
- Expertise in identifying and preparing test scenarios, test cases, test data & RTM.
- Able to understand Customer/Software requirement specifications quickly.
- Experience in defect reporting, defect tracking and defect management.
- Having knowledge about database testing and SQL queries.
- Well versed with agile methodology.
- Have good experience on JIRA for bug tracking and test.

Education

BCA, 2019

Dev Bhoomi Institute of Technology and Engineering

10th, 2014

CBSE, English

Software Test Engineer

S-cube Solutions

Responsibilities(Automation)

- Responsible for maintaining test automation frameworks using Java, Selenium, Cucumber, Maven, and IntelliJ.
- Manage automation codebase using version control systems like Git.
- Execute automated test scripts and see if there are any issues.
- Executing and analyzing test suite execution results.
- Integrate automated tests into CI/CD pipelines to enable continuous testing.
- Configure and optimize CI/CD workflows for efficient automated testing.
- Running Smoke packs with each deployment on relevant.
- Develop and maintain automated tests for mobile applications using tools like Appium or Selenium with mobile drivers.
- Design and implement automated tests for APIs using tools like Postman, Rest Assured, or similar.
- Responsible to hit the APIs through Postman tool and check the response time, status code, response body, etc.

Responsibilities(Manual)

- Collaborate with the development team to understand project requirements, user stories, and acceptance criteria.
- Develop a comprehensive test plan outlining the testing scope, approach, and timelines based on the gathered requirements.
- Ensure the test cases cover positive and negative scenarios, edge cases, and any other relevant test scenarios.
- Perform manual testing of website features and functionalities according to established test cases.
- Report defects and issues using a bug tracking system and collaborate with developers for timely resolution.
- Conduct regular regression tests to ensure new features, bug fixes, or system updates do not introduce unintended issues.
- Maintain detailed documentation of test plans, test cases, test results, and defect reports.
- Provide regular status updates to the project team and stakeholders about testing progress and any critical issues.
- Provide a comprehensive test summary report, summarizing testing efforts, results, and overall product quality.

Projects

8 Months

Warehouse management website and app

In Warehouse Management System the warehouse managers manage the orders arrived for delivery at various warehouses through the mobile app. He can assign the products by scanning it. Admin can add create multiple warehouses and assign warehouse managers to the warehouse. Admin can assign multiple products to a single warehouse or multiple warehouses and generate the barcode of the product also.

4 Months

Spin to Win

The Spin to Win plugin is like adding a fun game to your online store. It's a virtual spinning wheel that your website

visitors can interact with to win discount coupons. The store owner can control how the wheel looks, where it appears on the site, and how often visitors can play. When someone wins, they get a coupon code that they can use when making a purchase. The plugin also keeps track of the game's performance with reports, and both customers and the store owner receive notifications when someone wins. It's a creative way to engage customers and encourage them to shop on your site.

6 Months

Progressive Web App

The Progressive Web App for is like turning your online store into a super-fast and user-friendly app without the need to download anything. Visitors can easily add it to their mobile home screen for quick access. Built using advanced web technology (React.js), it's lightweight, customizable, and works well even with slow internet. With features like a shimmer effect during loading and a native app feel, it boosts user engagement, making your store more convenient and enjoyable. Plus, you don't have to worry about manual updates ? it stays up-to-date effortlessly.

5 Months

Size Chart

The Size Chart is like a helpful guide for online shops. It allows store owners to create easy-to-understand size charts for their products. Customers can then use these charts to figure out the right size for them, making it simple to shop without worrying about getting the wrong fit. The tool also offers options for adding descriptions and images, making it even more user-friendly. This way, both store owners and customers benefit from a smoother and more confident shopping experience.

7 Months

Delivery Boy App

The Delivery Boy App is a handy tool for store owners and delivery personnel. It uses Flutter technology to create a mobile app that connects them through tracking and chat features. Store owners can easily manage orders and delivery boys, while delivery personnel can accept or reject orders, pick up, and deliver products. The app streamlines communication and improves the efficiency of the delivery process.
