## Work history

**SOFTWARE ENGINEER**, 08/2021 - Current

**Fidelity Information Services (FIS) Global**, Bangalore , India

**Product: Data Navigator (DN)**

### Summary:

- Worked on the server side of DN which is a back-office transaction management solution.
- Worked on the functionalities like Transaction re-search, Exception Management System, Settlement and Reporting to enhance the effectiveness of exception management.
- Worked on a different Kanban release train which is a dedicated team to work specifically on the customer issues, bug fixes based on JIRA tickets. (Nov 2023 – April 2024)
- Actively participating in providing support to the software side clients.
- Actively involved in production support during the installation of a release.

### Projects:

#### Loading of a transaction log into DN's database

- To support and load a new type of transaction log which is incoming from a merchant and store the transaction details dynamically in XML format into the respective database tables through the load engine service.

#### Network's exception report scraping and generating consolidated output

- Worked on the scraping of individual network's exception reports and storing the data into DN's database and later generating an institution wise consolidated network exception activity report and file.

#### Reporting – Reconciliation, Exceptions and daily transactions

- Creating various daily reports and files for Settlement, Exception Management System and daily financial transactions.
