

Aman kumar

aman9693kumar@gmail.com | github.com/aman879 | linkedin.com/aman | +918252136010

Skills

Programming language: Java (Advanced), C (Intermediate), JavaScript (Intermediate), Solidity (Intermediate), Python (Intermediate), Rust (Intermediate)

Framework: React, Node.js, Next.js, Express.js, Web3.js

Database: PostgreSQL, MongoDB, ArangoDB

Machine Learning and AI: Machine Learning, Artificial Intelligence, Automation

Blockchain: Ethereum, Smart Contracts (Truffle, Hardhat, Foundry)

Development Tools: Git, Docker

Experience

Ignitus Networks

Blockchain Developer (Sep 2024 - Present)

- Developed and deployed smart contracts across **5+ blockchain networks**: Ethereum, Solana, Aptos, Near, Stellar, and Fuel.
- Built **Parking allocation system** smart contract on Ethereum using Solidity.
- Built **SBT (Soulbound Token)** smart contracts on **Aptos** and **Near**, ensuring secure, non-transferable token functionality.
- Designed and implemented a Rust-based Solana indexer(API) to:
 - Retrieve and analyze transactions and block details.
 - Fetch on-chain IDL (Interface Definition Language) dynamically.
 - Decode and interpret instruction data from smart contract transactions.

Projects

Fake News Detection Using NLP and Blockchain github.com/aman879/FakeNewsDetection-using-NLP-and-Blockchain

- Developed a system combining NLP and blockchain to detect fake news
- *My role:*
 - Developed and deployed smart contracts to ensure that news data remains immutable using hashing techniques.
 - Integrated smart contracts with a machine learning model for real-time detection and tracking.
 - Assisted in designing a user-friendly interface to simplify the web3 experience for users, leveraging Web3.js libraries.
- *Result:* Enhanced transparency and immutability in the system by utilizing blockchain and smart contracts.
- *Technologies:* Python, Solidity, React.js, Node.js, Web3.js

Decentralized Marketplace

github.com/aman879/decentralized-marketplace

- Created a decentralized course marketplace eliminating intermediaries
- *My role:*
 - Developed and deployed smart contracts to optimize data collection for courses and user information while maintaining a fully decentralized structure.
 - Ensured the elimination of intermediaries, enabling direct interactions between teachers and students.
 - Integrated the smart contract with the user interface to ensure seamless interaction.
- *Result:* Achieved a fully transparent system with no middlemen, significantly reducing operational costs.
- *Technologies:* Solidity, React.js, Hardhat, Web3.js

Face Recognition

github.com/aman879/face-recognition

- Built a face-recognition platform with easy login and simple UI
- *My role:*

- Developed a face-recognition platform to provide a simplified login experience for users.
- Designed a user-friendly interface, focusing on ease of use and quick access.
- *Technologies:* React.js, Node.js, Express.js, PostgreSQL

Education

DIT University – BTech in Computer Science (Specialization: Cloud Computing and Blockchain)	June 2024
High School (12th) – Science stream, CBSE	April 2020
Secondary School (10th) – ICSE	February 2018

Volunteer Experience/Extracurriculars

Private Tutoring	2017-2019
• Taught underprivileged students (Grade 8) through an NGO • Impact: Some students achieved 90+ in Mathematics	
E-sports	2018
• Led my team to the finals in a tournament, showcasing teamwork, strategy, and adaptability
