## Big Data Engineer

[nikama254@gmail.com](mailto:nikama254@gmail.com)

+91-9029896958

Mumbai, Maharashtra

### SUMMARY

---

- Proven **Big Data Engineer** with experience in Big Data/Hadoop technologies. Well-acquainted with Data pipelines, Data Structures, Data Managements, Data Transformation and Data Warehousing.
- Strong experience in **Hadoop** and **Spark ecosystems** including **Pyspark**, **Spark-sql**, **HDFS**, **Hive**, **Sqoop**.
- Proficient in **Python programming**, **OOP concepts** and performing complex **SQL queries**.
- Skilled in **integrating data** from various sources, including databases, API's and flat files into a datapipeline.
- Good understanding of **AWS** services like **AWS Glue**, **Lambda function**, **EMR cluster**, **Athena**, **S3** & **Redshift**.
- Having analytical and problem-solving skills with a focus on delivering high-quality data solutions.

### WORK EXPERIENCE

---

#### Flentas Technologies [October, 2024 – Till now]

##### AWS Data Engineer

**Project:** Cybersecurity Enhancement Project

##### Responsibilities:

- Develop a **Kinesis Stream** to ingest data from S3 and trigger **Lambda functions** for processing.
- Create **Amazon Glue job** to build a batch ETL process to transform raw JSON logs into relational formats, store the results in S3.
- Create Data Catalog and enable querying through **AWS Athena**.

#### Facile Info-Services Pvt Ltd. [Jan, 2023 – June, 2024]

##### Big Data Engineer

**Project:** Media Domain

##### Responsibilities:

- Integrated **MYSQL**, **HDFS** and **S3** sources, enhancing data retrieval efficiency.
- Developed and maintained **Python scripts** to clean and preprocess large datasets, removing inconsistencies and preparing data for analysis.
- Deployed data transformation pipelines by using **Spark**, **Spark-SQL**, **Python** and **Hadoop**, enhancing data quality and compliance by 30%.
- Aggregated data from multiple sources, including database to create comprehensive datasets.
- Utilized **Python** and **SQL** to combine and merge datasets, ensuring consistency and eliminating duplicates.
- Implemented data enrichment processes to enrich blank data with other external sources, increasing the depth and breadth of available information by using.
- Optimized data processing workflows to improve performance and reduce processing time.
- Created **AWS Glue ETL** jobs, crawled their output from **S3** and queried through **Amazon Athena**.
- Conducted a proof of concept on **R-clone** for efficient data transfer, evaluating its capabilities for secure and reliable file synchronization across cloud storage solutions.
- Regularly pushed code updates to **Git** repositories, ensuring version control and collaborative development.
- Maintained task tracking and project management using **JIRA**, updating tasks daily to reflect progress and priorities.
- Documented data processing rules, workflows and data quality strategies to ensure clarity and consistency.

### Big Data Engineer

**Project:** Retail Domain

#### Responsibilities:

- Sources for this project were **MYSQL** database, which gets combined with file sources.
- Design **Data Transformation** pipelines and implement **Data warehousing** and **ETL** processes.
- Used **Pyspark** for preprocessing and cleaning of data for next stage of analytics and build scalable ETL processes for migrating large datasets.
- This tables were then transferred into raw to processed to curated forms via **Python and Spark-SQL** scripts, which later loaded into **Hive**.
- Performed bulk load from **Hive** to **Hbase**.
- Use **Git** for version controlling and **Jira** for task tracking.

**Project:** Banking Domain

#### Responsibilities:

- Pull data by using **Sqoop** & create Hive tables on data in raw layer.
- Developed and deployed delta load functionality to track and maintain new, updated, and historical records in database tables, enhancing data accuracy by 30% and reducing manual data reconciliation time.
- Insert final table into enriched layer in hive.
- Involved in extension of pipeline from Hive to HBase for dashboard.
- Extracted the data from **MySQL** into **HDFS** using the Sqoop.
- Created Hive tables, dynamic partitions, buckets for sampling and working on them using **Hive QL**.
- These data get transferred into 3 different Hive tables based on each logic.

## EDUCATION

---

**Bachelor of Engineering** (2016 - 2019)

Mumbai University

## SKILLS

---

| Type                 | Details                                |
|----------------------|----------------------------------------|
| Operating Systems    | Windows Family, Linux                  |
| Databases            | MySQL, Hive, Hbase                     |
| Big Data systems     | HDFS, Sqoop, Spark-sql, Apache-Airflow |
| Programming Language | Python, Pyspark, Bash                  |

## PERSONAL DETAILS

---

**Date of Birth:** 16<sup>th</sup> July, 1995

**Marital Status:** Single

**Languages:** English, Hindi & Marathi

**Permanent Address:** 1/17, F L Sutari chawl, Sai nagar, Bhandup(E),  
Mumbai- 400042

## DECLARATION

---

I do here by declare that the above-mentioned information is true and complete to the Best my knowledge and belief.
