

Amit Mendhe

E-mail:amitmendhe@gmail.com

Mobile No: +91-9763214707

Summary

- 10 years of development experience in C++, 3 years on Qt.
- 2 years of Dev-ops Experience.
- Worked on embedded application development for automotive, telecom/datacom, power, medical, PLM, finance domain.
- Worked on Agile methodology.

Computer Proficiency

- **Languages:** C, C++, C++11/14/17, STL, QT, Python.
- **Environment:** Windows 10/7.
- **Cloud Platform:** AWS (S3, EC2, IAM, VPC, Route 53 etc..)
- **CI-CD Tools:** Git, Jenkins, Maven, Docker, Ansible, Jira.
- **Development Tools:** Visual Studio 2012, Star UML, Qt Creator, Rhapsody 8.2.
- **Debugger Tools:** Lauterbach T32, Visual studio 2012, keil.
- **RDBMS:** PL/SQL.
- **PLM Tool:** Enovia SmarTeam R27
- Worked on **LLD** (Low level design) and **HLD** (High level design) document.

Professional Summary

- **KPIT Technology (18th Aug 2022 – Apr 2024)**
I have worked as Senior Tech Lead in KPIT. Handled the team of 7 people.
- **TCS (Jan2022 – 17th Aug 2022)**
I have worked in TCS as Associate Consultant.
- **HCL Technology (Sep 2018 – Dec 2021)**
I have worked in PLM project for the Goodyear client.
- **Acclivis Technology Pvt Ltd (Feb 2018 – June 2018)**
I have worked in this company for Sewing machine product.
- **Capgemini India Pvt Ltd. (April 2012 – Dec 2017)**
I have worked for different project including medical, automotive, power domain.
- **Polaris Software, Pune. (22nd Aug 2011 – March 2012)**
I was working with Polaris Software Lab Pune as a Consultant.
- **EXFO India Private Limited. (9th July 2007 – 5th Aug 2011)**
It is a product-based company working in Telecom/Datacom domain.
- **KICIT Private Limited. (1st January 2005 – March 2007)**
It is training institute of Mr. Yashwant Kanetkar located in Nagpur. I have worked as assistant faculty for C, C++ language.

Projects:

Stella Merkel:

Client : Stellantis
Technology Used : C++11, C++14, C++17
Environment : Ubuntu
Responsibility : Design, Coding, Code Review.
Description : Currently we are working on an OTA application. The application communicates Device Interface Layer to the Big target ECUs. Upgrade the software in the ECUs.

Real Time Analytics:

Client : Refinitiv / London Stock Exchange Group (LSEG)
Technology Used : C++11, SQL
Environment : Windows, Linux
Responsibility : Development activities for enhancements.
Build and Deployment. Applications maintenance and support.
Description : In this project we manage around 30 applications which take real time values from various Stock exchanges and does the analytic calculations based on the market rules and populate the values to downstream Customer application. The analytic is calculated on standard market convention for instruments in fixed income, foreign exchange, commodities.

NIFI:

Technology Used : Python, Azure, Jenkins, Git, Docker, Sonarqube
Environment : Windows, Linux
Responsibility : Working on CI-CD Pipeline using Jenkins.
Setting up Development, Test and production environment. Building the artifact using Maven and do the vulnerability checking using sonarqube application.
Creation of docker image and pushing it to azure docker container registry.
Running the sanity test cases in Test Server and deployment of the application in the production server.

Slug Enhancement Phase II:

Client : Good Year
Technology Used : C++.
Environment : Windows 10, Enovia R27
Dev-Ops Tools : Jenkins, Git, Docker
Responsibility : Development, unit Testing, beta deployment and bug fixing.
Description : Objective of this project is to perform the following tasks:

- To extract marking text id from Enovia R27 and pass the value of marking text id to SAP while doing Create/Update EMR.
- New Tool for Blank Back Bolted Slug item to generate the new slug item from the existing one having one profile doc ID and Reference doc ID.
- New tool to clean the duplicate slug item from the SAP data based on marking text, profile doc ID and Reference doc ID.

Automatic First Tire Check Card (AFTCC):

Client : Good Year
Technology Used : C++.
Environment : Windows 10, Enovia R27
Dev-Ops Tools : Jenkins, Git, Docker
Responsibility : Development, unit Testing, beta deployment and bug fixing.

Description : The objective is to send marking information and mold ring information from GYPLM to SAP. The input for getting the required information would be the CTC number from SAP.
From the CTC number, we need to gather all the marking information and mold ring information from GYPLM. Once the information is gathered, it is required to send these attributes and its values to SAP in the form of an object.

Slug Enhancement:

Client : Good Year
Technology Used : C++
Environment : Windows 10, Enovia R27
Dev-Ops Tools : Jenkins, Git, Docker
Responsibility : Development, unit Testing, beta deployment and bug fixing.
Description : Objective of this project is to perform the following tasks:

- Data model changes on CTC and other classes to add new attributes.
- Changes to the existing applications and customization to support these new attributes.
- Develop a Transfer feature to send slug data from SmarTeam to SAP.
- Data extraction from GYPLM

CTF Controller:

Client : TMSC
Technology Used : QT, C++
Environment : Linux
Role : Designing Low level design and implementation part in QT.
Description : CTF controller is a medical device which can be handled by doctor to perform biopsy, cementing on the patient. The device can be used to monitor the scanning of patient through various mode like helical, one shot and continuous mode.

MOOG:

Client : MOOG Devices, US
Technology Used : C++, GUIX
Environment : Windows
Role : Implementation of GUI, middleware and vector-cast unit testing.
Description : It is medical device project to implement the therapy like intermittent, Contiguous etc. I have worked on GUIX part of this project. Also implement the middleware part by MVC model. I have also done unit testing for the project with the help of vector-cast tool to adhere the medical standards of US.

MY14:

Client : PASA (CRYSLER)
Technology Used : C, C++
Environment : QNX
Role : Working as Team Lead of Offshore Team.
Description : MY14 is PASA based project working in automotive domain. Working on CRYSLER infotainment system mainly in audio part. Providing features like navigation, traffic alert, Digital FM. Also providing support for car play feature.

Power Quality Analyzer:

Client : Rishabh Instruments
Language : QT, C++
Environment : Linux
Role : Design & implementation of UI development and business logic.
Description : Power Quality Analyzer (PQA) will be used to monitor quality of three phase electrical supply at various stages in the supply distribution chain. It will also be used in various industries where power monitoring and analysis is required. It measures VRMS, VPeak, IRMS, IPeak, Power, Energy and many more parameters.

EXFO Projects:

Main focus of implementing and changing OSI LAYER2. EXFO product has a three layer model, First layer is C sharp layer, another layer responsible for creation of interface and interact with UI with the help of interface. Third layer is responsible for implementing all business logic. My role is handling with 2 layer and interact with the UI as per requirement.

Worked Feature: SDT (Service Disruption Test)

Language : C++
Environment : Windows XP
Role : Understanding the requirement.
Design & implementation of the interface, DbObject and StateController. Also implemented the processor part for handling the statistics part.
Description : The SDT (Service Disruption test) allows to measure the disruption time based on no traffic being received (No Traffic Mode). This test measures a "no traffic" period that corresponds to a disruption of service considering that a continuous traffic flow is being generated without interruption.

Worked Feature: IPV6

Language : C++
Environment : Windows XP
Role : Understanding the requirement.
Design & implementing the solution in C++.
Description : In this feature, there are number of sub-components.
RFC2544 Layer implementation-The statistics were calculated according to Layer 1, Layer2 and Layer3 in Mbps and %.
PFS2544 Programmable frame Size- It includes user defined and RFC2544 frame size. RFC2544 have fixed frame format while in user defined user can enter from any value up-to a certain limit with the change in VLAN.

Worked Feature: CABLE-TEST

Language : C++
Environment : Windows XP
Role : Understanding the requirement.
Implementing the solution in C++.
Description : This feature includes the measurement of the Ethernet cable up-to 120 meters. This feature has capability to detect short circuit cable, open circuit cable, and cross cable.

Personal Details:

Full Name	: Amit Y. Mendhe
Date of birth	: 22 nd January 1981.
Passport No	: Z5415426
Sex	: Male
Marital Status	: Married
