M a i h a r , I n d i a

Summary Aspiring **Data Scientist** with expertise in **machine learning**, **statistical analysis**, and **data visualization**. Proficient in **Python**, **SQL**, and data science libraries such as **Pandas**, **Numpy**, **Scikit-learn**, and **Matplotlib**. Experienced in **data manipulation**, **feature engineering**, and building **predictive models** using **classification** and **regression** techniques. Strong understanding of **exploratory data analysis**, **hypothesis testing**, and **data mining** to drive business decisions. Adept at applying **logistic regression**, and **K-means clustering** for solving real-world problems. Passionate about leveraging my skills to provide **actionable business insights** and contribute to a forward-thinking, **innovation-driven organization**.

Skills

Data Visualization tools and libraries: Python (Seaborn, Matplotlib), Microsoft Excel

Languages: Python, MS SQL Server

Statistics and Probability: Descriptive analysis, Inferential analysis (hypothesis testing, confidence interval estimation)

Database systems: RDBMS

Data analysis and statistical tools: Microsoft Excel

Data Science Libraries (Python): Pandas, Numpy, Seaborn, Matplotlib, SciPy, Statsmodels, Scikit-learn (sklearn)

Machine learning algorithms and advanced analytics: Linear Regression, Logistic Regression, Decision Tree, Random Forest, KNN, K-Means Clustering

Data Science Techniques: Predictive Modeling, Feature Engineering, EDA, Supervised and Unsupervised Learning, Model Validation

Data Preprocessing: Handling missing values, Scaling, Normalization, Outlier Detection

Strong communication skills: Presenting analytical results and insights to key stakeholders

Projects

Marketing Mix Modeling

- Conducted **EDA** to determine the relationship between several channels of spend w.r.t sales incurred at weekly level.
- Applied **Linear regression** model to evaluate the impact of marketing activities on sales.
- Enhanced **model effectiveness** by reduce **RMSE** of the model by performing **hyperparameter tuning** using **GridSearchCV**.

Customer Segmentation

- Conducted **exploratory data analysis** to uncover customer characteristics like age, income, and spending patterns.
- Applied **K-means clustering** to segment customers into distinct groups for specialized marketing strategies.
- Used the **Elbow method** to determine the optimal number of clusters, improving model efficiency.
- Visualized segmentation results with **Seaborn** and **Matplotlib** to support decision-making for targeted offers.

Education

Post-Graduation Program
Data Science and Machine Learning from Massachusetts Institute of Technology Aug 2024

Graduation
Bachelor of Commerce (Honors) from Awadhesh Pratap Singh University, Rewa
Sep 2022
