Enthusiastic COBOL Programmer with 4.2+ years of experience in Insurance Domain and uses proven communication to work with client. A customer oriented & multitask professional with excellent analytical and logical skills.

Employment

Analyst 1 Software Engineering

Aug 2023 - Present

DXC Technology, Chennai

Project Name: FNWL Interface Realignment

Customer Name: Resolution Life, United States

Project Description:

This project is to migrate LifeComm Related Applications from FNWL to RLUS (Resolution Life Environment).

Responsibilities:

- Understanding the functional requirements completely to achieve the appropriate business solution.
- Converting the functional requirements into solution using all the available technical features.
- Preparing the high and low-level design with the problem solution
- Walking through the design with SMEs for the design approval.
- Performing various scenarios-based testing to cover all the possible functional as well as technical Errors.
- The Existing Interfaces work seamlessly in the New Environment.
- Any Interfaces which are found to be no longer being used will be decommissioned in the New Environment & Maintenance and support.

System Engineer

Oct 2020 - Aug 2023

Tata Consultancy Services, Chennai

Project Name: ZAV to ICM Migration

Customer Name: Ergo Insurance, Germany

Project Description:

The scope of ZAV (Future Sales Architecture) project was to replace the existing legacy Mainframe Applications by SAP (ICM, BP, OM) Modules. As part of the Migration project, the Contract Information in Mainframe Applications need to be extracted, formatted, and transferred to SAP Modules for integration into new system. Also develop, Correction/Resend process to enable Business Users to update and resend the migrated data that are stored in the event logging table after migration.

Responsibilities:

- Studying and understanding the functional requirements of the current Commission Process and the Migration project, to develop the Migration Solution
- Collaborate with Interface Applications, DBAs, Architecture Team, Testing Team and identify the Functional and Technical requirements.
- After studying the software setup of the current and future interface systems, converting the Functional and Technical requirements into solutions using the available technical features.
- Preparing the High and Low-level design for the Migration Solution
- Upon the design approval, develop the mainframe solutions as per the approved design documents.
- Performing various scenario-based testing to cover all the possible functional as well as technical errors.

Certificates

LOMA 281

Meeting Customer Needs with Insurance and Annuities - 3rd Annuities

- Collaborate with Testing Teams, Interface Applications and Business Users for testing the developed mainframe solutions.
- Identify and implement Process Improvement measures to optimize the performance of the migration process to save CPU Cost/Time and to fit the Migration window.
- Coordinate with DBA, Release Management and Batch Management Teams for the staging and implementation of Mainframe Solutions
- Identify and decommission the Modules/interfaces that are no longer needed in the new environment.
- Develop Application manual Documents and transition the Application Maintenance and Support to Maintenance Team

System Engineer

Apr 2022 - Aug 2023

Tata Consultancy Services, Chennai

Project Name: Release Management Activities

Customer Name: Ergo Insurance, Germany

Project Description:

Based on the scheduled release calendar, coordinate with Developers, DBA and Release Management for the staging of the Modules from lower Environment to higher Environment.

Responsibilities:

- As per the Company Release Calendar, develop the Application specific Release Calendar.
- As per the Release calendar, identify all activities involved in Release Management, and develop the Release Activity plan.
- As per the Release Activity Plan, coordinate with Developers, DBA, Release Management and Batch Management for Release Execution
- After Release execution, perform Shake Down of the application, inform all the stake holders and release the application for business use.

Achievements

- Received “**Star Award**” for the contribution towards delivery of Complex Mainframe Migration Setup in time for SAP Integration in the Quarter July 2022 - September 2022
- Received “**Star Award**” under Learning Category in the Quarter January 2021 - March 2021.
- Received “**Star Award**” for learning EKS Broker, Data pool and Online Concepts in quick time and delivering Mainframe solutions for the Migration.
- Received “**On the Spot**” award for learning the Business Requirements and delivering Mainframe Modules for the Risk Determination logic.
- Received DXC Collaborators award for being a great Team player in FY24.
- Appreciated by Clients and company Management several times, for solving the complex migration tickets in quick time.

Contribution to Organization

- At Account level, I actively collect, generate Monthly Timesheet Reports to management for billing purpose.
- As an Onboarding Manager, I actively coordinated with newly boarded resources and new joiners for those onboarding and client network access related activities.
- Conducted many sessions on Project Overview, Key deliverables and Mainframe Concepts to the entire team for overall learning and knowledge buildup.
