

Anirban Paul

DOB : 22nd September 1995 • **Mobile:**+91-7904284380 • **Email-ID:**paulanirban4@gmail.com

CAREER OBJECTIVE

I consider myself a responsible, creative and a person who takes the initiation from the front. I would take pleasure from the challenges and goals that your organization could assign me. My achievements also prove that I can work in teams and also I believe I'm a result-oriented person.

ACADEMIC QUALIFICATIONS

Degree	College/School	Year	Percentage (%) / CGPA
B.Tech	Vellore Institute of Technology, Vellore	2014-18	8.50
Class XII	The Heritage School, Kolkata	2014	83.25%
Class X	El Bethel School, Kolkata	2012	87.4%

SKILL SET

• Programming/Scripting Languages

Python, C++, C, MYSQL, SQL

• ML/Data Science/Cloud

Machine Learning, Deep learning, Natural Language Processing, Named Entity Recognition (Custom NER, Spacy, NLTK), Computer Vision, Image Processing, Learning to Rank, Credit Risk Analysis, Azure, Google Cloud Platform, AWS Athena, AWS Sagemaker

• Frameworks and Libraries

Keras, TensorFlow, Scikit Learn, Flask, Pandas, OpenCV

• Other Software Skills

Android App Development on Android Studio, GIMP

EXPERIENCE

• **ORACLE CLOUD INFRASTRUCTURE** (May 2022 - Present) - Developing Cognitive products for Oracle Cloud using ML/DL/DS

• **BLACKBUCK**(June 2021 - May 2022) - Powering the core product of BlackBuck Logistics App with Data Science and Artificial Intelligence.

• **ZYCUS**(April 2020 - June 2021) - Worked on development of multiple BOTs for a product known as MERLIN AI STUDIO using Natural Language Processing, Computer Vision and other state of the art Machine Learning approaches

• **WIPRO DIGITAL**(April 2018 – April 2020) - Worked on Deep Learning and Machine Learning approach for developing document cognition suite product which aims to automate the task of document understanding using Computer Vision, Image Processing, Deep Learning, Natural Language Processing, Named Entity Recognition, Credit Risk Analysis.

• MENTORING/SME EXPERIENCE

BITCLASS(Jan 2021 - PRESENT), **ALMABETTER**(Jun 2021 - Present), **NEWTON SCHOOL**(Jun 2022 -Present)

PROJECTS

Churn Prediction (BLACKBUCK)

- A system using RNN sequence based architecture to classify whether a certain user will churn or not using his historical app activities as features. Was responsible for extraction of features from the Feature store using Athena queries, analysis and model development end to end.

Learning To Rank (BLACKBUCK)

- A model designed to improve the ranking of listings on the Blackbuck marketplace app which can improve the customer conversion on the app. Was responsible for extracting features from the Features Store using Athena queries, XG Boost model V1 model as well as the Deep Learning based V2 ranking algorithm end to end.

Autonomous Quick Source (ZYCUS)

- A BOT designed to understand entire process of sourcing, procurement, payment in the supply chain industry and to automate the task of searching the best supplier for a product, price forecasting, price negotiating for that product, and then cracking the deal for that product. A state-of-the-art BOT to handle the entire process of procurement.

Supplier Risk BOT (ZYCUS)

- A BOT developed using NLP to analyze whether any supplier of any product in a supply chain domain will default because of COVID pandemic due to Financial Crisis or any other crisis.

Checkmark Classifier for Form Analyzer (Wipro HOLMES)

- I built a robust system to detect if checkbox is marked or not in a white page like a KYC form, or claim form or any other type. The project uses a binary classifier algorithm using SVC on HOG descriptors to differentiate between check mark is present or not using sliding window approach.

Detection System to distinguish between Signature and Handwriting and Signature Verification (Wipro HOLMES)

- I developed a CNN classifier which could detect signature in checks to use the detected signature for further id verification. This helped the human intervention of going through thousands of check to manually verify the signature of a particular person. The Signature Verification was developed by fine tuning pre-trained DeLF model by Google. This was used by banks to verify the person who signed on the check hence reducing human effort.

Finding of same product listings on e-commerce website (Personal)

- This is a personal exploratory project. It was developed using CNN auto-encoders on an unlabeled dataset, to find out the duplicate product listings on an ecommerce website. It was a unsupervised learning approach which made it robust compared to existing models like Phash or Siamese network.

Product Supplier Search Process (Personal)

- The objective of the project was to suggest top ten vendors of a particular product at particular geographic location from various e-commerce websites. In this project I have used various machine learning algorithm like Random Forrest and Gradient Boosting to compare and develop a recommendation system that gives top ten vendors for ASUS laptop. This project was the part of the Pre-Joining Project for Wipro.

OTHER PROFESSIONAL ACTIVITIES/ACHIEVEMENTS

- Won Alpha Squad award at Wipro HOLMES for continuous excellent performance
- Winner's Circle Points at Wipro HOLMES for excellent performance
- Machine Learning Nanodegree Certification From Udacity
- Deep Learning Specialization from DeepLearning.ai (Coursera)
- Certified from Microsoft Technology Associate in Database Administration.
- Core Committee Member of The Fine Arts Club (VIT)
- Social works like Help-Age India and Juvenile Care.
- Participated in State Level Spell Bee Competition.
- Won several certificates in Arts and Design.

HOBBIES

- Art and Drawing
- Singing
- Reading
