

NAYINENI ANJANEYULU

AWS DevOps Engineer

anji061899@gmail.com

+91 7893207622

Job Objective

Seeking a dynamic role in DevOps and AWS, where I can use my expertise in cloud infrastructure, automation, and continuous integration to drive operational efficiency, enhance system performance, and support the growth of cutting-edge applications. Eager to contribute to innovative solutions while advancing my skills in a fast-paced, collaborative environment.

Profile Summary

- Having nearly 3 years of experience in AWS DevOps, specializing in managing multi-cloud infrastructures and optimizing CI/CD pipelines for efficient and scalable cloud operations.
- Proficient in AWS services including VPC, EC2, S3, EBS, Auto Scaling, SNS, RDS, Route 53, and CloudWatch.
- Designed IAM policies to enforce granular access control for AWS users, groups, and roles.
- Strong experience in monitoring, configuration management, build, deployment, and release management using DevOps best practices.
- Extensive experience using AWS Secrets Manager for secure storage and automated rotation of credentials, API keys, and sensitive information.
- Skilled in Git operations, including merging code from the development branch to master, ensuring code readiness for deployment.
- Hands-on experience with build tools like Maven and npm to automate project builds and dependencies.
- Strong knowledge of CI/CD pipelines using AWS CodePipeline, AWS CodeBuild, and AWS CodeDeploy to streamline the build, test, and deployment processes.
- Experience with Azure services such as Virtual Machines, Azure DNS, Azure Active Directory, Azure MySQL Database, and Azure Blob Storage.
- Deployed Java web applications by packaging them into WAR files and deploying to Apache Tomcat servers.
- Expertise in Docker for containerizing microservices and managing deployments with Kubernetes for scalability and resource optimization.
- Hands-on experience with Ansible for configuration management and automation across cloud environments.
- Proficient in managing AWS infrastructure using Terraform and AWS CloudFormation to ensure Infrastructure as Code (IaC) for scalable, cost-effective, and secure deployments.
- Experience with Trivy for container vulnerability scanning, misconfiguration detection, and secret scanning.
- Deployed and managed microservices applications on Kubernetes, ensuring efficient resource utilization and inter-service communication within the cluster.
- Practical experience working with agile methodologies and delivering solutions in an iterative, collaborative environment.
- Strong analytical and problem-solving skills, with the ability to work independently and handle complex tasks with minimal supervision.

Academic Details

- Bachelor of Science in Computer Science from Rayalaseema University with 78%
- Board of Intermediate M.P.C with 85.5%
- Board of Secondary Education with 78.00%

Certifications and Acclaim

- Certified in AWS Services Fundamentals.

Technical Skills

Operating Systems	Linux, Windows, Ubuntu
Version Control Tools	Git, GitHub
Build Tools	Maven, NPM
CI Tools/Code Quality Tool	Jenkins / SonarQube
Configuration Tool	Ansible
Containerization & Orchestration Tools	Docker and Kubernetes
Infrastructure as Code (IaC) tools	Terraform and CloudFormation
Application Server	Apache tomcat server, HTTP Server, Nginx
Cloud Technology	Amazon Web Services (AWS), Azure Cloud
Bug Tracking	JIRA
Monitoring tools	Prometheus, Grafana, Cloud Watch
Artifactory Storage	Nexus and JFrog

Work Experience

- Currently working as AWS DevOps Engineer at RJAY Technology in Hyd, India from Jan 2024.
- Previously worked at Carelon Global Solution in Hyderabad, India.

Projects Handled

Project: 03

Project Name : B2B E-Commerce Platform
Technology : Linux, Git, Jenkins, AWS, Docker, Maven, Kubernetes, Trivy, Terraform, Ansible, Ubuntu
Designation : AWS DevOps Engineer
Duration : Jan 2024 to till the date

Brief Description of Project:

The B2B E-Commerce Platform project involved the design, development, and deployment of a scalable online marketplace tailored for business-to-business (B2B) transactions. The platform was built to facilitate seamless transactions between vendors and corporate clients, providing features such as bulk ordering, pricing negotiation, and integrated payment gateways.

Responsibilities:

- Designed and maintained Git repositories, providing day-to-day support to developers to ensure seamless version control and collaboration.
- Utilized Maven to manage Java project builds, ensuring successful artifact development and reliable project compilation.
- Created automated S3 backups with versioning enabled and transitioned objects to Amazon Glacier for cost-effective long-term storage and archiving.
- Provided troubleshooting support for build failures and managed the Nexus Artifactory repository for efficient artifact storage and access.

- Developed and maintained automated CI/CD pipelines using Jenkins to streamline code deployment and enhance development workflows.
- Created and maintained SonarQube dashboards and reports to track key quality metrics.
- Implemented and managed AWS infrastructure using Terraform for Infrastructure as Code (IaC), ensuring scalable and efficient cloud environments.
- Created and maintained Ansible playbooks for automating configuration management, software installations, and system updates across multiple servers.
- Deployed and managed containerized applications using Docker, ensuring high availability, scalability, and fault tolerance.
- Configured Kubernetes network policies, Ingress controllers, and services (ClusterIP, NodePort, LoadBalancer) to ensure secure, scalable communication within the cluster.
- Utilized Jira for task and initiative tracking, streamlining project management and team collaboration.

Project: 02

Project Name : Healthcare Appointment Booking System
 Technology : Jenkins, Git, GitHub, AWS, S3, Linux, Docker, Ubuntu, Trivy, OWASP, EC2, VPC, RDS
 Designation : Associate Cloud Engineer
 Duration : Mar 2023 to Dec 2023

Brief Description of Project:

The Healthcare Appointment Booking System aims to streamline the appointment scheduling process for healthcare providers and patients. It will integrate patient records, provider availability, and automated reminders, providing real-time updates and a user-friendly interface to enhance the overall experience.

Responsibilities:

- Managed and configured AWS services (CloudFront, EC2, ELB, RDS, SQS, S3, VPC) to meet evolving business needs.
- Provisioned and attached volumes to EC2 instances to optimize storage and performance.
- Designed and implemented complex IAM policies, roles, and user management to enforce secure access control across AWS resources.
- Created automated S3 backups with versioning enabled and transitioned objects to Amazon Glacier for cost-effective long-term storage and archiving.
- Configured security groups and associated them with EC2 instances within VPCs to ensure secure networking and access controls.
- Developed and maintained automated CI/CD pipelines using Jenkins for efficient code deployment and integration.
- Implemented CI/CD workflows with AWS CodePipeline and CodeDeploy to streamline and automate deployment processes.
- Managed AWS infrastructure as code (IaC) using Terraform to ensure consistent, scalable, and repeatable environment provisioning.
- Leveraged Trivy to scan container images for vulnerabilities, identifying and addressing potential security risks in Docker images prior to deployment.

- Collaborated with globally distributed agile teams to deliver security-focused software solutions, reducing operational risk across the software lifecycle.

Project: 01

Project Name : EMS
Technology : AWS, Git, Jenkins, Docker, Maven, Tomcat, Nginx, Aws CodePipeline, AWS Secrets Manager
Designation : Associate Cloud Engineer
Duration : Jun 2022 to Mar 2023

Brief Description of Project:

Employee Management System (EMS) is an integrated platform that optimizes workforce administration. Key features include location-based tracking for accurate login and logout records, a comprehensive employee database, and performance evaluation tools. It simplifies leave management by allowing employees to apply for and track leave requests, streamlining administrative processes and enhancing oversight for improved efficiency in managing employee activities.

Responsibilities:

- Provisioned and attached volumes to EC2 instances to optimize storage and performance.
- Built the application POM with Maven as the build tool, automating the creation of build artifacts.
- Designed and implemented CI/CD pipelines using AWS CodePipeline, automating the deployment and delivery workflows.
- Configured AWS RDS for relational database management, ensuring high availability, data durability, and fault tolerance.
- Created a Dockerfile to build a custom image for the application, pushed it to Docker Hub, and pulled it for seamless containerized deployment.
- Managed and configured Nginx as a reverse proxy server, optimizing load balancing and securing connections to application servers.
- Set up AWS CloudWatch for comprehensive monitoring of application performance and system reliability, enabling proactive issue resolution.
- Configured and deployed web applications on Apache Tomcat server, ensuring optimal server performance and reliable application availability.

Personal Details

Father Name	: N Srinivasulu (Late)
Date of Birth	: 18 th Jun 1999
Gender	: Male
Marital Status	: Single
Nationality	: Indian
Languages Known	: English, Telugu, and Hindi
