

ARAVIND L K

9790236425

DevOps Engineer

aravindlk27@gmail.com

Bangalore, India

DevOps engineer with 3.10 years of hands-on experience in designing, implementing, and managing end-to-end DevOps processes. Adept at collaborating with cross-functional teams to automate and optimize CI/CD pipelines, enhance system reliability, and streamline deployment workflows.

WORK EXPERIENCE

Binmile Technologies, Noida

Jun 2024 - Sep 2024

Realkey Software Solutions, Bangalore

Dec 2020 - June 2024

EDUCATION

Bachelor of Technology
Ponnaiyah Ramajeyam Institute of Science and technology
2016- 2020

SKILLS

- **AWS**
- **Ansible**
- **Docker**
- **Terraform**
- **Kubernetes**
- **Bash & Python Scripting**
- **SonarQube**
- **Prometheus**
- **Grafana**
- **Azure**
- **Linux**
- **Jenkins**
- **Apache Tomcat**

SUMMARY

- With 3.10 years of experience, a DevOps engineer is well-versed in implementing and optimizing CI/CD pipelines.
- Proficiency in leading-edge tools such as Jenkins, specializing in the automation of end-to-end software delivery processes.
- They have a deep understanding of IaC tools like Terraform, Ansible, to automate infrastructure provisioning and configuration management.
- My expertise encompasses AWS and Azure, where I've managed and fine-tuned workloads, being well-acquainted with services such as EC2, S3, RDS, and Kubernetes Engine.
- My grounding in Linux, Git, GitHub, Maven, Jenkins, and SonarQube has been fundamental.
- Proficiency in container technologies like Docker and container orchestration platforms like Kubernetes.
- Skilled in scripting languages like Python, and can write automation scripts to streamline operational tasks.
- Skilled in deploying scalable and resilient cloud solutions with Azure Cloud services, leveraging global infrastructure for optimal performance and data residency compliance.
- I am experienced in setting up robust monitoring systems like Prometheus and Grafana.
- Maintains clear and comprehensive documentation for all processes, configurations, and infrastructure.
- Proficient in Git for version control and collaborative code management.
- Designing and managing scalable and secure cloud-based solutions using AWS.
- Building, automating, and optimizing continuous integration and continuous deployment pipelines to accelerate software delivery.

PROJECTS INVOLVED

Project - 3 (Jun 2024 - Sep 2024)

Domain - Investment Management

Company Name - Binmile Technologies

Designation - DevOps Engineer

- Designed and deployed scalable cloud infrastructure for mutual fund processing systems using AWS and Terraform. Automated the provisioning of resources, ensuring high availability and efficient resource utilization.
- Created Ansible playbooks AWS environment to handle system setup, application deployment, and updates with minimal manual intervention.
- Integrated Docker with CI/CD pipelines to ensure seamless application deployment across environments and enabled better resource utilization.
- Developed Python scripts within CI/CD pipelines for custom automation, such as code validation, test orchestration, and deployment verification, reducing errors and improving deployment efficiency.
- Automated testing and validation of code before deployment to ensure the security and stability of mutual fund applications.
- Monitored system performance and application behavior using AWS cloud monitoring tools, ensuring the mutual fund systems operated with minimal downtime and high reliability.

Project - 2 (Sept 2022 - May 2024)

Domain - Healthcare

Company Name - Realkey Software Solutions

Designation - DevOps Engineer

- Designed and implemented a robust CI/CD pipeline using Git and Bitbucket for version control, orchestrating seamless deployment from source code to production.
- Automated infrastructure provisioning with AWS CloudFormation, ensuring scalability and security. Developed CloudFormation templates for efficient S3 bucket provisioning.
- Streamlined build configurations for consistency and repeatability across environments. Proficient in Git for branching, merging, and conflict resolution.
- Implemented Azure DevOps pipelines to enhance CI/CD processes and ensure faster delivery cycles.
- Extensive expertise in Linux, including configuration, administration, and troubleshooting. Skilled in Maven for build automation and dependency management.
- Proficient in Java application deployment on Tomcat servers. Experienced in Ansible for infrastructure provisioning and configuration management.
- Strong troubleshooting skills in complex DevOps environments. Established artifact management strategies in S3, implemented versioning and lifecycle policies.
- Orchestrated serverless deployments with AWS Lambda. Collaborated with teams to optimize Git workflows.
- Integrated monitoring and logging solutions into CI/CD pipelines using Python scripts for custom alerting and detailed progress tracking, ensuring swift issue identification.

Project - 1 (May 2021 - Aug 2022)

Domain - E-Commerce

Company Name - Realkey Software Solutions

Designation - DevOps Engineer

- As an AWS DevOps Engineer, services, achieving a 50% reduction in monthly expenditures through meticulous analysis and right-sizing of resources like EC2, VPC, Redis, and ElastiCache.
- Leveraging AWS tools like Cost Explorer and Trusted Advisor, I identified and implemented opportunities for cost savings, including caching strategies and fine-tuning network configurations.
- I established robust monitoring mechanisms and proactive alerts to track cost metrics and performance indicators, collaborating cross-functionally to align optimization efforts with business objectives.
- Additionally, I documented best practices and regularly updated knowledge repositories for EC2, VPC, Redis, and ElastiCache.
- My expertise extends to Linux administration, Git version control, and a deep understanding of AWS services like EC2, S3, RDS, and VPC.
- I utilize SonarQube for continuous code quality analysis and Jenkins for automating build, test, and deployment processes, fostering a culture of efficiency and automation within development teams.
- Overall, my skill set and experience make me a valuable asset for enhancing DevOps practices and ensuring the success of cloud-based infrastructure and applications.
