

Curriculum Vitae

Ashish P. Jain - DevOps Engineer | Linux/Windows | AWS/Azure/GCP Cloud | 12 years

Mail: jashishtech@gmail.com LinkedIn: www.linkedin.com/in/jainashish55 Cell: +917666682509

Career Objective

Design, implementation, and maintenance of projects in cloud technologies. Exposure with AWS, GCP, Azure cloud environment.

Expertise and Skills

- Linux: Ubuntu/Redhat/CentOS and Windows OS.
- Lead a team to design the architecture of application large scale of services.
- TCP/IP, Load Balancer, nmap ,HTTP,SSL,SSH,DNS,DHCP,NFS.
- Good hands on automation tools like saltstack,terraform.
- Building a powerful server monitoring using Nagios/Datadog/Prometheus.
- Re-usable terraform modules to define infrastructure for ease of provision.
- Scripting (bash,python,ruby) and agile(SCRUM) practice.
- Building and designing infrastructure to meet client's requirements.
- Good skills on docker,kubernetes.
- Solid experience with AWS cloud services. VPC, EC2, S3,VPC,RDS EBS amongst others.
- Good analytical,troubleshooting and Communication skills.
- Implemented multiple database clusters for a scalable environment.

Work Experience

Interaslabs Pvt Limited.

Since August-2023

- Design CICD solution for multiple applications.
- Worked on migration of CICD from Azure Pipeline to Gitlab Saas.
- Take active part in the release cycle for applications hosted in Kubernetes.
- Create IaaS code in terraform for provisioning the resources on cloud.
- Create a generic dockerfile for multiple microservices.
- Define helm chart for deploying services.
- Automation for designing apigee hybrid solution for proxy solution in GCP.
- GCP Infrastructure automation for a scalable environment.

Jio Haptik Technologies Private Ltd**June 2022 - July-2023**

- Managing core infrastructure that is built on Azure/AWS cloud.
- Create the infrastructure using terraform modules and make changes as and when required.
- Clustered setup of elasticsearch, rabbitmq ,mongo database systems which are critical for application functioning.
- Handle on-call alerts and resolve with quick TAT.
- Provide solutions to complex problems and implement them end-to-end.

- Accion Technologies Pvt. Ltd.**April-2016-June2022***Profile: Senior Devops Engineer.*

- AWS cloud for deployment of applications.
- Experience in setting up mysql cluster on aws cloud.
- Orchestration of infrastructure with help of puppet/ansible.
- Bash/python scripting for backup and claims processing.
- Well-versed with the containerisation technology.Worked on building up kubernetes cluster and deploying microservice over the cluster.
- Building/promoting the application from Jenkins CI/CD and building a full stack from single click.
- Using Artifactory to store the docker images as well as application artifacts and pull same to perform deployment.

Worked for US Client in Healthcare Domain:**Since Nov 2017**

- Managing Concourse for CICD.
- Use of VPC, EC2, Network routes, ASG, ECS API gateway and other AWS services.
- Lambda jobs to daily backup of EC2 instances based on their tags.
- Built a robust network with Hub-Spoke model using AWS Transit VPC hosting Juniper firewall vSRX.
- Web Traffic is routed with a routed policy defined in Checkpoint server. DDoS prevention at ALB level.
- Experience in managing Hashicorp product nomad cluster, consul and vault.
- ELK for log aggregation. Microservice deployment in ECS cluster .
- Terraform to build and manage the AWS resources.
- Datadog integration for EC2, APM metrics monitoring.
- Hosting Windows VM joined to AD server on boot.
- Build DR infrastructure to meet security guidelines.
- Deploying stateful services using kubectl and helm charts to deploy the microservice on k8s cluster.

- Sungard Solutions India Pvt. Ltd.**Dec-2014 – March 2016***Profile : Devops Engineer.*

- Worked on Vmware hosting also managing the standalone boxes.
- Creating/modifying scripts in python,bash as per requirements.
- Used maven to perform deployment of java applications and integrate it within bamboo.
- Narrow down the issues with the application when it is down and take mitigation steps to recover.
- Automate the configuration with ansible playbooks.
- Bamboo CI tool for automating the deployment process.
- Cobbler for installation of OS on VM.
- Using Rsyslog for log processing.
- Setup mysql replication.
- Setting up a server using nginx,apache.

- Raw engineering inc

Dec-2011 - Nov 2014.

DevOps Engineer.

- I was responsible for designing infrastructure for applications with high-availability and scalability using AWS cloud services.
- Deployment of application on AWS infrastructure with autoscaling and using salt for configuration management. Handling the automation tasks and solving the difficulties coming over it.
- Working experience of deploying .Net,Ruby,Java based applications on windows,linux. with mysql/Sql server as database.
- Scheduling regular backups using bash,python scripts for an effective disaster-recovery process.
- Providing on-call support for production related infrastructure and effectively handling outages for the same.
- Scheduling maintenance to update instances with patches.
- Tuning the system performance. Adhering to agreed SLA terms.
- Determining the most cost-effective cloud model as per requirement.
- Create plugins for monitoring tools as per need and take active part in open-source tools.
- Good with tools like graphite,yum,sensu,stashboard,GIT/SVN.
- Experience in configuring nginx,apache to serve http/tcp requests.
- Schedule and execute regular system activities.
- Basics of TCP/IP protocol,fundamentals of DNS,SMTP,POP services. File sharing tools like NFS.
- Good with iptables and worked on various distro like Fedora,Centos,Debian.

Education Qualification & Highlights

Mumbai University, Bachelor of Engineering (Computer Engineering) from Smt. Indira Gandhi College of Engineering in 2011.

Maharashtra Board, H.S.C(Science) from IDUBS College in 2006.

Maharashtra Board, S.S.C from Powai English High School in 2004.

Worked onsite for 3 months to deliver the networking solution for a US client.

Strength:

- Quick Learner and eager to know and try out new technologies and tools.
- Self-confidence.
- Ability to track down the issue be it network or application.
- Adapt quickly with a new team and project.

- Proven to be a strong individual player as well as group leader.

Academic Projects

1. Website Project – RTO (Registration Transport Office)

Developed a website using HTML & CSS for developing the website layout and used PHP as a server side Scripting language and JavaScript as Client-side Scripting language.
The database used was MySql.

2. Virtual exchange engine.

Description: The project is based on the share market. It helps to provide a virtual exchange engine using which different brokers can test the application which is being developed.

Technology Used: Java (front-end), MySql (back-end), Open-source FIX-Protocol.

Additional Information:

1. Current Location : Mumbai.
2. Total years of experience: 11y 8m
3. Skills / Expertise: Deployment of applications over AWS cloud as well as on-premise.
4. Hold Indian Passport : Yes
5. Do you hold any visa: US B1/B2 VISA.

Training/Certificate

Stood 2nd in a networking competition held in college (SIGCOE).

Data Warehousing and Data Mining, one-day seminar conducted by Dept. of Computer SIGCOE, CSI student branch (SIGCOE).

Pursued course in Core and Advanced Java from Mikado Solutions.

Personal Details

- Name : Ashish Prakashchand Jain.
- Age/Sex : 36/Male.
- Marital Status : Married.
- Hobbies : Visiting Religious temples and reading Jain scriptures. Exploring new places.
- DOB : January 1988.
- Nationality : Indian.
- Languages : English and Hindi.
- Preferred Location : Mumbai.
- Address : 403 , Shree Ganpat Tower , New Golden Nest Road, Bhayandar 401105 .Thane.
