LinkedIn Profile – [Ayush Ankur](#)

PROFILE

Experienced C++ developer with 1.8 years of experience in developing and maintaining software for telecom applications. Proven track record in managing requests from end-to-end, interacting with global teams and contributing to software life cycle management. Skilled in C++, Linux, 5G/ 4G with a strong understanding of software architecture and CI/CD tools- Jenkins, GitHub, Docker.

SKILLS

- C++ / C programming
- Linux
- Python
- CI/CD Tools: Jenkins, GitHub
Docker, Kubernetes
- Version Control: Git
- Networking - 4G / 5G
- Design/ Development
- Troubleshooting
- Layer 1, Layer 2, Layer 3 protocols

EXPERIENCE

Altistar - A Rakuten symphony company

Member of Technical Staff

Nov 2021 - July 2023

- Worked with 5G PLATFORM TEAM where we mainly used C++ and Linux to develop ORAN features.
- Gathered and documented business needs from the global clients.
- Worked closely with cross-functional teams to analyse and develop new features.
- Managed activities using agile or hybrid methods.
- Developed and improved several C++ modules using STL, non-linear Data Structures and algorithms to meet diverse client requirements.
- Good understanding of 5G RAN architecture - CU, DU, RU units and E1, F1, Xn, S1 interfaces for communication between them, protocols and procedures.
- Worked on protocol stacks that included Phy, MAC, RLC, PDCP, SDAP, RRC (L1 / L2 / L3).
- Developed testing setups for 4G as well as 5G for the team to test changes and builds.
- Designed configuration files - Yang, Helm for pod deployments.
- Used CI/CD tools like Jenkins, GitHub, Docker and Kubernetes.

EDUCATION

- **M.Tech - CSE**, IIT Patna, Jan 2025- Dec 2026 (ongoing)
- **B.Tech - Information Technology**, GL Bajaj ITM, Greater Noida, 2017-2021 || **8.38 GPA**
- **CBSE 12th** (Computer), Chinmaya Vidyalaya, Bokaro Steel City, 2016 || **84.2%**
- **CBSE 10th**, DAV Public School, Jehanabad, Bihar, 2014 || **10.0 CGPA**

PROJECTS

Drillisch : C++

Jan 2022 - Jul 2023

- Participated in technical and functional discussions to identify progress ideas and implement continuous improvements.
- *Troubleshooting* of production issues, performed root cause analysis, and provided support.
- Used *Wireshark* for real-time analysis and filtering.
- Implemented bug fixes and managed the life cycle of those fixes.
- Implemented *non-linear Data Structures* for various modules.
- Understanding RAN architecture that includes CU, DU, RU and E1, F1, Xn, S1 interfaces for communication between them, protocols and procedures.
- Connection establishment between units - Backhaul, Midhaul, Fronthaul using config files.
- Developed testing setups (4G and 5G both) for the team to test changes and builds.
- 10+ major code changes as per requirements that includes IPsec, SCTP, RMA syscomm, etc.
- Automated *Sanity* testing to ensure the integration and stability of applications.
- Used *Jenkins* and *GitHub* together for pulling code, triggering builds & reporting commit status.

TEF : C++

Jun 2022 - Jul 2023

- Defined and documented use cases and performed functional analysis based on client's requirements.
- Sanity testing to ensure integration of the changes within the release before moving the new build to the production.
- Debugging and log analysis using *tcpdump* for pod status and failures
- Reduced *gRPC* calls timing from 10s to 1ms to ensure stability of connection.
- Implemented new feature using *parallel processing* in IPsec for more than 1 child.
- Used *Docker* and *Kubernetes* to deploy and maintain pods to be up when required.
- Worked on *protocol* stacks that included Phy, MAC, RLC, PDCP, SDAP, RRC (L1 / L2 / L3).
- Designed configuration files - Yang, Helm for pod deployments.

Intelligent Real-Time Driver Alert System : Python

Dec 2020 - Jul 2021

- A stand-alone system that can be installed on vehicles to help drivers and warn them in real time when required.
- *Presented the research paper of this work at 4th International Conference on ICICV - 2024 on 10th April, 2024.*
- *Conference paper published : Innovations in Computational Intelligence and Computer Vision, Proceedings of ICICV 2024, Volume 1 (Springer) -*
https://link.springer.com/chapter/10.1007/978-981-97-6995-7_13
- This project is broadly having 3 submodules:
 1. Drowsiness Detection using Eye Aspect Ratio (EAR).
 2. Yawn Detection using Euclidean distance.
 3. Obstacle Detection using an Ultrasonic Sensor.
- Major advantage of this system over others is dynamic thresholding.

Online Test portal : Java (Internship)

Jun 2019 - Jul 2020

- An online portal that lets students login and after validation provides a set of MCQ questions and provides the score at the end of the test itself.
- This was based on a static database.
