

BHARATHI KANNAN

C/C++ 98/11/14/17 | Linux Internals | Telecom domain | Printer Domain | Embedded Application | Middleware

Location:Bangalore-560095 | Mobile:8861303395 | kbkdiscover@gmail.com | <https://www.linkedin.com/in/kbk004/>

CAREER SUMMARY

Seasoned SW professional expertise in Software Design, Development for various systems. Skilled in C++, C & Linux, with comprehensive SDLC experience.

Strong in requirement analysis, planning, design, implementation & testing, and have hands on experience in developing multi-threaded applications, middleware and solutions.

PROFESSIONAL ACCOMPLISHMENTS

- Successfully Migrated Project from single core to Multi Core Architecture & C++98 to C++14.
- Reduced ~50% testing time by multiple utility tools creation.
- Refactored the large volume source code for Performance(improved ~25%) & maintainability.
- Designed & implemented multiple robust modules & Designed DB for Printer User Data.
- Patent owner (App. No : 202341044829),Owner of 20+ innovative ideas at Toshiba.
- Overall, 12 Months Onsite experience of working in Germany & Japan.
- Achieved CSAT >4.5 from past 3 years from Japan customers.

PROFESSIONAL EXPERIENCE – 15+ YEARS

1. Working as a **Technical Architect/Associate Engineering Manager** @ Toshiba from Jan 2015 to Present (~10 years)
2. Worked as a **Senior Solution Integrator** in Ericsson India Global from Dec 2011 to Dec 2014.
3. Worked as a **Project Engineer** in WIPRO Technologies from May 2009 to Dec 2011.

SKILLS AND TOOLS:

Programming Languages	: C, Cpp98/11/14/17, OOPs, Linux Internals
Basics (Intermediate)	: Python, Java, SpringBoot, REST APIs
Operating System	: Unix/Linux/Windows
Skills	: SQL, Data Structure and Algorithm(DSA), Design Patterns, Multi-Threading, IPC, Sockets
Scripting	: Shell, python, sed, awk, lamda, Makefile, LDAP.
Project Management	: Agile/Scrum, JIRA, Redmine, CI/CD.
Version Control	: ClearCase, SerenaDimensions, CVS, SVN, Git.
Tools	: GDB, Valgrind, Purify, gcov/lcov, SIPP, SQLite3, Maven, Jenkins
Review	: Beyond Compare, araxis merge,
Compiler	: Intel ICC
Protocols	: SIP, SDP, TCP/IP.
DMS software	: OpenKM, Alfresco.
Cloud Basics	: Docker, AWS, Azure, OpenText.
LCNC	: Kogito, Camunda, BonitaSoft.
IDE/Source Browse	: Understand tool, Source Insight, Eclipse, Visual studio, Vi Editor.

EDUCATION:

B-Tech-IT, May 2008, Anna University, Chennai

PROJECTS:

MULTI-FUNCTION-PERIPHERAL PRINTERS. (TOSHIBA) : TEAM SIZE: 14

MFP (Multi-Function-Peripheral) is an advanced printer supports features like Copy,Scan,Print,Fax,e-Fling,shared print,Shared home,etc. Flexibility to port to multiple product lines is achieved by multi layered architecture (MVC).

User requests are primarily managed at Application Layer with secured access control. Plugins running at application layer receive requests from user-interface like Touch Panel, Web UI and 3rd-party applications.

The requests are processed based on the availability of the information and delegated to lower layer plugins and the received response is sent to the appropriate client.

RESPONSIBILITIES AND EXPERIENCE:

- Design and Development in C/C++ with Linux OS
- Handling 20 components (processes), as a component owner prime responsibility are development of new requirement from Requirement analysis to till deployment that includes design, design review, coding, code review, testing, and TC review.
- Review & Approve Design/Source Codes & Testcases.
- Reverse Engineering to understand the architecture and design of the projects.
- Problem solving and critical thinking skills used for fixing Urgent System and Design fault reports, field claim issues.
- Implemented Adobe Secure PDF Encryption and decryption using -RC4 40-bit, 128 bit. AES- 128 bit and 256 bit using MD5 digest and SHA 256, 384 and 512 hashing.
- Created Requirement Analysis documents [SRS, ACR and CRS], Design [HLD, LLD,DD, UML diagrams]
- Executed strategic leadership and management initiatives, including detailed effort estimation and risk assessments
- Explored Open Text,AWS,Azure for AI-powered microservices evaluation. Lead multiple OSS Evaluations and study
- Have hands-on with AWS S3 file storage Gateway,SNS,SQS,LAMDA,Bonitasoft.
- Techno managerial experience of 5+ years(Team Size 10-15),Mentored junior/mid-level developers and new-joiners
- Lead & Co-ordinate with On-site Customer SPOC Daily.

OSS-BROADBAND MANAGEMENT SYSTEM (ERICSSON) - TEAM SIZE: 40

SOA and SOI are Ericsson applications developed for end-to-end OSS services and functionalities including, Provisioning, Activation, Service Assurance, Fault Management (FM), Performance Management and Inventory Management.

The applications are developed in C/C++ (SOA) and Java (SOI). SOI applications communicate with SOA layer using JMS and CORBA and SOA layer communicates with the underlying network elements (NEs)/Managed elements (MEs)

Serving high-profile clients like Deutsche Telekom and Telefonica.

RESPONSIBILITIES:

- Design and Development in C/C++ with Linux OS
- Bug fixing and modularize existing functionalities.
- Followed Agile/Scrum methodology for product development.

NGN GETS GOVT EMERGENCY TELECOMMUNICATION SERVICE (WIPRO) TEAM SIZE -10

Government Emergency Telecommunications Service (GETS) provides National Security/Emergency Preparedness (NS/EP) personnel a high probability of completion for their phone calls when subscriber's normal methods for placing calls are unsuccessful.

GETS is designed to provide a high probability of completion for calls routed in the Public Switched Telephone Network (PSTN) during periods of severe network congestion or disruption. These capabilities, referred to as Legacy GETS, were migrated, and supported on the CS2000 soft switch.

NGN GETS is Session Initiated Protocol (SIP) based voice service and priority processing and signaling calls.

RESPONSIBILITIES:

- Design and Development in C/C++ with Linux OS
- Bug fixing
