Bangalore, Karnataka | Phone: +91-8886220933 | Mail: ra.bharat2000@gmail.com | GitHub: <https://github.com/rab20>

SUMMARY

Experienced Senior Software Engineer with expertise in Design, Development, Testing, and maintenance of software systems. Excellent communication and interpersonal skills. Proficient in various languages, databases, and tools. Capable of working effectively as an individual contributor, as well as collaborate as a part of a productive team.

SKILLS

API Development: Java, Spring Boot, JPA, JDBC, TeamCity, Artifactory, Splunk, IntelliJ, Kafka, CDC, JUnit, Mockito
Cloud Technologies: Amazon Web Services(AWS), Pivotal Cloud Foundry(PCF)
Mainframes: COBOL, JCL, CICS, DB2, SQL, IMS, DB2 Stored Procedure, Z/OS Connect, Endeavor, Changeman, Control-M, CA7, File Aid, VSAM
Data Science: Python, NumPy, Pandas, PySpark, Data Mining, ML/DL Algorithms and Concepts, NLP
Visualisation: Matplotlib, Tableau

WORK EXPERIENCE

August 2018 - Present: Software Engineer at NatWest Group

- Converted 350+ legacy programs to modern day executables mitigating legacy risks and improving maintainability and efficiency.
- Expertise in Legacy changes on Mainframe and to expose data stored on Mainframes as REST APIs using z/OS connect, web services using COBOL.
- Created multiple RESTful API services using DB2 Stored Procedures as a part of legacy application modernisation to expose the underlying data on Mainframe.
- Experience using tools like Git, SonarQube and Code Coverage improving code quality by 40%.
- Successfully supported numerous Incident-free code deployments with 100% adherence to standards.
- Created tools like Job Flow Diagram, Job Status Dashboard to resolve the pain points caused during analysis, thus making the process unified and quicker by at least 60%.
- Built multiple Java Microservices enable screens for business users to expedite their day-to-day functionalities and bring down the legacy code(RACE) usage by 80% .
- Brought down the legacy risk on the system by building Java Microservices to replace Assembler code base bringing down the assembler code base by 20%.
- Experience with Streaming architecture including IBM CDC and Kafka.
- Experience with varied set of technology landscape - Microservices, legacy applications on Mainframe, Web Services, Cloud technologies, Distributed computing, and Cloud services containerisation.
- Provide technical consulting, mentorship and acting as an enabler for the successful delivery involving all phases of Design, Build, Test & Deployment.
- Continuously working with a sight of KPIs to develop an understanding of how my work effects the overall team performance and working to improve the same.
- Experience with end-to-end project lifecycle using both Waterfall and Agile Methodologies.

- Automated the ML model metrics evaluation for Credit cards and Loans for Risk Analytics Team as part of a Gig. This gave me insight into ML model evaluation metrics and how it impacts a customers Credit Card/ Loan application.

November 2016 - November 2017: Consultant at Allstate Solutions Pvt Ltd

- Enhanced the existing new business processing limit from 60 to 200 enabling higher customer enrolment.
- Streamlined the error reporting process by reducing the number of errors greatly which in turn reduced the time AM team spent on the error resolution.
- Thorough analysis and end-to-end testing of the core application modules.
- Continuous enhancements on the existing modules to improve customer experience and to stay compliant with the legal insurance standards.

July 2014 - October 2016: Systems Engineer at TATA Consultancy Services (Client: American Express)

- Built 22+ modules to mask and remove Customer's Personal data saving of about 10,000 USD for the client due to the reduction in the run time.
- Migrated high volumes of card transactions data to modern applications to remove technical backlogs.
- Worked on understanding and building applications on Hierarchical database system - IMS.

COURSES

- Full Stack Developer Nano degree Course by Udacity - This involved designing, building, testing, and deploying various applications using -
 - Python, Flask, SQLAlchemy, PostgresDB for Backend Development.
 - Auth0 for RBAC.
 - Postman, curl for Testing.
 - AWS and Heroku for Deployment.
- Python - The Practical Guide [2023 Edition] on Udemy

EDUCATION

- | | |
|------|---|
| 2023 | BITS – Pilani, Rajasthan, India (Work Integrated Learning Programme)
M.Tech in Data Science and Engineering. |
| 2014 | MVGR College of Engineering - Vizianagaram, Andhra Pradesh, India
B.Tech in Mechanical Engineering. |

PERSONAL PROJECTS

- Built a PD(Probability of Default) model to predict whether a customer is likely to default on their loans – Binary Classification using LightGBM - 60,000 rows * 122 features.
- Built a Logistic regression model to identify any anomalies in the customer transactions. This was to identify any possible fraudulent transactions on their account. – 50,000 rows * 40 features
- Built predication models using KNN and Decision Tree classifiers post finding correlation among the features, feature selection, normalisation using Min-Max, imputing required features.
- Built Deep Learning regression models to predict the customer's expenses based on the spending pattern.
- Built a stock exchange system using Kafka producer and consumer in Python.
