PROFILE

Motivated and enthusiastic recent graduate with a strong foundation in cloud infrastructure and DevOps principles. Hands-on experience with AWS cloud platform, along with proficiency in Ansible and Docker. Eager to apply knowledge in automating infrastructure provisioning (IaC) and integrating CI/CD pipelines. Passionate about learning and implementing best practices for secure access control and infrastructure management. Quick learner and proactive problem-solver, ready to contribute to a dynamic team environment.

EDUCATION

Atria Institute of Technology
Bengaluru, Karnataka

Bachelors of Engineering in Electronics and communication Engineering

Aug 2019–July 2023

- University: Visvesvaraya Technological University (VTU)
- CGPA: 7.2

COURSE

Besant Technologies
Cloud Computing

India, Bengaluru

- Git for Versioning Controller
- Jenkins as Integration tool, Continuous Integration and Continuous Deployment (CI/CD)
- Docker for Software Containerisation, Kubernetes for Container Orchestration
- Ansible & terraform for configuration deployment and management
- Monitoring Server and services using Nagios, Prometheus, Grafana, Splunk
- Linux Installation and OS upgradation, Installing Packages using YUM and RPM
- User administration and password policy management
- FTP, SAMBA, NFS, Web configuration
- YUM configuration, Swap configuration
- Configuring crontabs and scheduling the jobs
- Good understanding in the AWS services like EC2, VPC, S3, Route53, IAM, RDS, Cloud Watch, Cloud Trail, Elastic load balancer, Auto scaling, IAM, EFS, EBS

Certifications

- Cloud computing course successfully completed in Besant Technologies

Projects

- FTP configuration: Using FTP configuration, FTP Master server data saved in public path, which all the client servers want to access and download (get and put).
- NFS configuration: Using network file system configuration master server drive partition can be shared to client servers for accessing data and writing data
- Password less Authentication: Configured password less authentication using “ssh-keygen” to make login to client servers from master server without password, Once password less authentication is configured, All clients servers health check/commands can be executed in master server without entering into client server
- Creating a custom VPC and creating jump server and web server and connect web using jump server and log in web server using ssh private key and launching a web page in web server and mounting volumes permanently and creating s3 buckets and mounting to the instances and attaching Auto-Scaling for CPU utilization and attaching load balancer and running the web page using loadbalancer DNS.

ADDITIONAL SKILLS & INTERESTS

- | | |
|---|----------------------|
| • Cloud Platform (AWS) | Python |
| • Continuous Integration and Continuous Delivery (CI/CD), Jenkins | SQL |
| • Bash scripting , Grafana, Prometheus | Git, GitBash, Github |
| • Ansible, Terraform, Nagios | Docker, Kubernetes |
| • Linux (Redhat, Cent OS, Ubuntu) | |
