EDUCATION

DevOps Full Course , Bangalore, India	2024
Jain university , Bangalore, India <i>Master of Computer Applications in Storage and cloud technology CGPA: 7.6</i>	2022-2024
Jain university , Bangalore, India <i>Bachelor of computer applications in Cloud technology and information security, CGPA: 8</i>	2019-2022

SKILLS

- **Tools:** Nmap, basics of Wireshark, VPN, Maven
 - **Operating System:** Windows Server, kali Linux, windows 11.
 - **Database Software:** MySQL, SQL Plus, Dynamo DB, Oracle SQL
 - **languages:** C (intermediate), C++, HTML, CSS(Beginner), Java
 - **Cloud Platforms/Software:** Azure, Amazon web services, Netlify, Veeam, Nutanix
 - **Virtualization Technologies:** VMWare EXSI, Hyper-V
 - **Scripting Skill:** Bash, PowerShell
 - **Visualization monitoring tools:** Grafana, Prometheus, Grafana, AWS Cloudwatch
 - **Knowledge of infrastructure as code (IaC) tools:** Terraform, AWS CloudFormation
 - **Familiarity with containerization technologies:** Docker, Kubernetes
 - **Understanding of CI/CD tools:** Jenkins, Git, AWS Code Pipeline
 - **Networking skills:** Cisco packet tracer, Understanding of TCP/IP, DNS, DHCP, and subnetting.
 - **Interpersonal Skills:** Problem solving, Critical thinking, Leadership quality
-

PROJECTS AND PAPERS

1. Hash based identification of matching DNA profiles for Forensics investigation:

Mini project was about creating criminal database and how it would help in Forensics investigation. We used Derby database for storing the data which are the DNA sequences of people. Connectivity was majorly relying on JDBC Driver. We used Hashing Technologies to safeguard the data which were highly confidential and stored in the data base.

2. Enhanced encryption algorithm for DNA Biometric Authentication:

This paper discusses about DNA, authentication, encryption, and algorithms, encoding and cryptography. The proposed approach helps in making secure transmission using an enhanced encryption algorithm and secure hash-based DNA authentication. Tools used: SHA256, Server, Database

3. Paying Guest Management Website

This project explains about creating a website for centralized management of paying guests or hostels. We have deployed this project in the cloud environment for easier management and availability of the services across multiple regions. Built with: MERN stack, Netlify, Render

4. Survey on cloud computing security issues

[<https://www.google.com/url?q=https://ijrpr.com/uploads/V5ISSUE3/IJRPR23978.pdf&sa=D&source=editors&ust=1720606791355305&usg=AOvVaw2z5bOga1fbvfb8jgyi06qL>]

This paper explains about the security issues, Cloud Security, Cloud Architecture and challenges of IT infrastructure and how we can handle them.

5. Kollector (“Collecting waste and building future”) [<http://ipindia.nic.in/index.htm>]

A website for collecting the solid waste and managing them. It is a patented website for collecting the waste from the residents and further giving it to recycling companies for further management.

Built with: HTML, CSS, React.js, Node .js, MongoDB, AWS Cloud infrastructure.

6. Deployed an application in docker environment

Mini project was about deploying an application in a docker environment through EC2 server to streamline its environment setup and ensure consistency across various stages of deployment. Improved scalability and deployment efficiency by containerizing the application, reducing dependency issues and setup time.

Built with: Docker, AWS EC2, Containerization, Application Deployment, nginx

CERTIFICATIONS

- AWS essential training for developers
- Microsoft networking concepts
- Learning AWS certified practitioner
- CompTIA Security+(SYO-501) Cert prep: 1 Threats, Attacks and Vulnerabilities. [Infosys Springboard]
- VMWare vSphere 7 Professional: Networking
- Windows Server 2016: Deploying Containers
- Getting Started with DevOps on AWS [AWS training and certifications]
