Java Developer Trainee Backend functionality, Login Module operation perform.

CERTIFICATES

Internship Java Developer (03/2021 - 06/2021)

During the internship, he has worked on "Medical Hub" Live Web Project different modules and demonstrated good skill in projects work.

Java Developer Trainee (09/2021 - 02/2022)

During his training, he was exposed to the activities in java development. we found him to be extremely inquisitive and sincere.

PERSONAL PROJECTS

Awaz (09/2021 - 02/2022)

- This project is designed to give loan, the customer will get loan from the bank and the process of providing loan has been made in it. All this we have given a we have created web application in which we have used Java, MySQL, database this project was a group project, I worked on the login module of the this project and performed the operation functionality.
- In this project when I login the id password is generated and the password is stored in the database in encrypted form, document verification and storing the registration of the customer in the proper database was difficult, I created three tables, we connected the database through JDBC, I had to generate the Id of the employee to access this Application.

Medical Hub (03/2021 - 06/2021)

- E-commerce solution is one place where we can get all required goods/products online. The proposed system helps in building a website to buy, sell products or goods online using internet connection. This is web application which was made for medical, this web application was made to deliver medicine from medical store to customer's location. In this web application customer orders medicine online by uploading doctors' receipt on this web application and giving his address.
- In this project I worked on admin module I did the check whether data is being stored properly in the database or not, I did the check operation and to login to this web application. In which we have coded Java, Advance Java, MySQL, only database Jsp, servlet, this web application was made for medical store. I generated in password is saved in the database, update, delete, remove on verification.

Electronic Shop Management System (01/2019 - 04/2019)

- It was an electronic website, through which we can know the information of Goods online and if we could call that stuff online then that person can go to this website.
