Key Expertise

Around 4.1 years experienced IT professional having extensive working experience in **Build/Release Management and DevOps with Cloud Microsoft Azure and AWS** adhering to SDLC.Experience in DevOps core technologies: **Docker, Ansible, Git, JfrogArtifactory, Github Actionsand Cloud services**. Efficient in providing high-end solution to the company.

Experience Summary

- Currently working as Senior software engineer in TCS Services since March 2020

Work Summary

- Very good experience in Git on Branching, Tagging and merging the source code between different Branches and administration like Creating Repositories, access control in Git.
- Experience in setting up CI/CD environment for product build and deploy along with the automation Test Case execution.
- Extensive experience in the design and implementation of fully Automated Continuous Integration, Continuous Delivery, Continuous Deployment pipelines and DevOps processes for agile projects.
- Expertise in Continuous Integration setup. Configured multiple build jobs, integrated test cases, created Reusable workflows and performed plug-in installations, backup using GitHub actions.
- Developing and deploying Azure Web Apps, Azure Functions and other serverless or microservices-based solutions.
- Implementing Azure infrastructure components such as virtual machines, storage accounts and virtual networks.
- Ensuring application security and implementing identity and access management (IAM) using Azure Active Directory or other authentication and authorization mechanisms.
- Integrating applications with Azure services, including Azure SQL Database, Azure Cosmos DB, Azure Blob Storage and Azure API Management.
- Creating the automated build and deployment process for various application, re-engineering setup for better experience and leading up to building a continuous integration system for all our products.
- Good Experience in interlinking multiple Jenkins jobs with pipeline, integrated sonar to run as part of Jenkins build job, monitoring nightly builds and daily builds and Deploy with different environment like QA, UAT, DEV.

- Experience in Tools- Docker, Kubernetes, GitHub Actions, Ansible, SonarQube, Jfrog, Confluence and Jira. Having thorough experience in working AGILE methodology.
- Professional Experience on Containerization tool like Docker, Writing Dockerfiles for creating Docker images and containers for different Environments.
- Experience in Installing, configuring and maintaining apache/tomcat Application Servers.
- Having working experience on SCM tool Git, Bitbucket and build tools such as Maven and Gradle.
- Good Knowledge of Shell, Python and YAML scripting.
- Good Knowledge of Azure administration.
- Good Understanding of Software Development Life Cycle (SDLC).
- Very quick in learning new technologies and a good team player working with Project Managers, Architects, Developers, Business Analysts, Testers.
- Excellent interpersonal and communication skills-collaborating with cross-functional teams to gather requirements and translate them into technical specifications.

Skills

Operating Systems	Windows 8, Windows 10, Linux,
Version Control Tools	GIT, Bitbucket
Build Tools	Maven, Gradle, Ms Build
Source Code Repo	Git, GitHub, GitLab, BitBucket
Scripting	Bash, YAML, Powershell, Python
Cloud	Azure, AWS
CI/CD	Github actions, Jenkins, Gitlab,Azure,AWS
IAC	Terraform, CloudFormation
Code Analysis Tool	SonarQube, Blackduck, Fortify, Codescene, Superlinter
Containerization	Docker, Kubernetes
Artifactory	Jfrog, HSP, EKS

Project Details

Project 1:

Project Name	Saas-Factory	Duration	Mar2022 - Till date
		Team Size	10
Description	Objective is to offer GitHub workflows that any SaaS team can reuse to rapidly create their own Continuous Integration workflows.		
Role & Contribution	Role: Tech-Lead-DevOps Responsibilities: • Create Reusable CI-Pipeline End-to-End Master template for Java, DotNet and NodeJs. • Create Individual templates for Build dependent codequality tools like sonarqube, Blackduck, Fortify. • Create Individual templates for build independent tools like superlinter, Code duplication, codescene., • Create template for Build and push docker image to various docker registries(Jfrog,HSP,EKS) • Deploy the created Reusable assets on different environments and enable CI-Pipeline. • Supporting Cross-teams to deploy the CI-Templates and providing Project specific extensions to their Pipeline.		
Technologies	GitHub Actions, Composite actions, reusable workflows, Sonarqube, Blackduck, Codescene, Fortify, Linters, Jfrog, EKS, AWS, Docker.		

Project 2:

Project Name	iPortman Web Application	Duration	Nov 2021 - Dec 2022
		Team Size	4
Description	IPortman is a web based integrated management solution built on open source architecture that meets the growing needs of the sea ports and terminals and enable them to gain the control over their complete operations. This scalable solution is developed to address the major functions like marine, cargo and Yard operations, berth Planning, container operations, logistics and billing operations.		
Role & Contribution	Role: Azure DevOps Engineer Responsibilities: - Involved in Automated the CI CD pipeline process from Azure Devops using .Net, MS Build and maven tools for application module automation. Complete responsive web application, bug fixes. - Created automated PowerShell scripts for automations - Maintained source code repository in GIT, GitLab. - Responsible for creating Network Security Groups and add inbound rules for various ports like RDP, Custom ports to allow access only from private network address prefix to provide utmost security. - Deploy and manage the Azure Services like Virtual Machines, Web Apps, Virtual Networks. - Managing Continuous Deployment Preparing GitLab YML file for application build and publish Pipeline. - Scans and Code analysis using SonarQube. - Created Builds and Packaging creation using Zip. - Perform and manage daily and nightly scheduled and unscheduled builds in Quick Build tool and co-ordinate with dev teams for any build failures. - Involved in creating Build and Deployment Pipeline from YML file for .Net based application. - As part of DevOps Team, Analyze the existing Projects Build, deployment and Release Process and provide the necessary solutions for Automation avoiding repetitive manual tasks.		
Technologies	Azure Devops, Windows, Web App, ASP.Net(MVC), SonarQube, Azure Repos, Powershell, NSG, VM.		

Project 3:

Project Name	TGH	Duration	April 2021 - Oct 2021
		Team Size	10
Description	TGH is one of the leading companies which provide services to all the customers to collect waste. They will manage their customer information and to improve their sales by providing better services to the customer Which is used to track the Collected Waste related details and status, here we will provide the details of all products related to TGH with current status of products. This will help to project managers to track the status and follow up their respective team.		
Role & Contribution	Role: Azure DevOps Engineer Responsibilities: • Integrated Azure Functions, Logic Apps, and Service Bus to build serverless event-driven solutions, reducing operational overhead and increasing efficiency. • Created and configured Azure storage accounts to store and manage data securely. • Integrated Azure Active Directory to manage identities, access, and authentication across Azure services and applications. Employing Azure AD B2B/B2C, I streamline collaboration and customer interactions. • Leveraged tools like Azure Resource Manager (ARM) templates and terraform to automate infrastructure deployment, ensuring consistency and repeatability. • Created serverless functions using Azure Functions, enabling event-driven, cost-effective, and scalable execution of code. • I implemented event-driven architectures using Azure Event Grid, enabling real-time event publishing and consumption. • Designed and implement NoSQL database solutions using Azure Cosmos DB, providing globally distributed, low-latency data access.		
Technologies	Azure Devops, Azure Repos, ARM, Web App, PowerShell, Azure Active Directory, Azure cosmos DB, Logic apps		

Educational Qualification

Diploma	2020
BCA	Evening College (2020-2023)

Achievements

- Nominated as one of the **Best New Employee** award for the year **2017**
- Awarded as the **Best Team of the Year(2019)** for **DevOps Team** from TGH.
- Awarded for outstanding performance, service and dedication towards our organization as **Star of the Month - Digital Product Services** from **LTTS-2022**.
- Recognized as **Best Performer Award** for contribution towards Saas-Factory from **Philips-2023**

Additional Information

- Ability to build a strong relationship with the clients.
- Strong Interpersonal and Communication skills
- Ability to work in a team with diverse backgrounds.
- Determination, dedication, and discipline
- Willing to learn and adapt to new opportunities and challenges.
