Bangalore

CORE COMPETENCIES

- Cloud Computing
- DevOps Methodologies
- Continuous Integration and Continuous Deployment (CI/CD)
- Infrastructure Automation
- Microservices Architecture
- Networking and Security
- Software Configuration Management
- Source Code Management
- Virtualization and Containerization
- Software Development Life Cycle (SDLC)

EDUCATION

Year: Bachelor of Engineering in Computer Science from Satyabhama University, Chennai

PERSONAL DETAILS

Address: Chennai

Date of Birth: 25th May 1994

Languages Known: English, Tamil and Hindi

PROFILE SUMMARY

- Specialized in DevOps with over 6 years of experience, demonstrating a strong background in technical management and providing client-facing applications support
- Actively contributing as a Senior DevOps Engineer at Publicis Sapient, overseeing the support of DevOps tools, management of Continuous Integration and Continuous Deployment, and administration of event management tools
- Demonstrated a successful track record in developing and implementing innovative solutions to enable seamless CI/CD implementations, configurations, and automations
- Proficient in build/release/software configuration and well-versed in DevOps methodologies, with a strong ability to establish and manage CI/CD pipelines
- Achieved success in seamlessly integrating various tools and effectively delivering releases for multiple applications
- Proficient in a wide range of technical skills, including Linux, Unix, Windows, Mac, Jenkins, AWS CodePipeline, Maven, Gradle, Ansible, Terraform, AWS, Azure, Git, Docker, and Kubernetes

TECHNICAL SKILLS

Operating Systems: Linux, Unix, Windows, Mac

Continuous Integration Tools: Jenkins, AWS CodePipeline

Build Tools: Maven, Gradle, npm

Configuration Management Tools: Ansible

Infrastructure as Code (IaC): Terraform

Public Cloud: AWS, Azure

Version Control System/SCM: Git

Remote Repositories: GitHub, Bitbucket

Containerization Tool: Docker

Container Orchestration Tools: Kubernetes

Code Coverage: Cobertura

Code Quality: SonarQube

Artifactory: JFrog

Repository Management: Nexus

Service Management Tools: Jira

Scripting: Bash

Continuous Monitoring Tools: Nagios, Prometheus, ELK Stack

CI Backup: Kopia

Web Servers: Apache, Nginx, Tomcat

WORK EXPERIENCE

Feb 2022 - Present | Senior DevOps Engineer | Publicis Sapient, Bangalore

Responsibilities:

- Architected comprehensive end-to-end solutions for seamless CI/CD deployments across on-premises and cloud environments
- Collaborated with diverse cloud services to facilitate essential CI/CD processes
- Spearheaded the development and management of microservice applications utilizing Docker and Kubernetes, guaranteeing secure infrastructure isolations
- Ensured the smooth maintenance of microservice applications across various environments
- Seamlessly integrated Kubernetes with CI tools and achieved successful deployment of diverse infrastructures
- Effectively oversaw Kubernetes clusters on AWS and Azure, ensuring efficient maintenance and management of diverse infrastructures
- Seamlessly integrated a variety of tools to facilitate code pull and the delivery of necessary changes to infrastructures
- Accountable for overseeing comprehensive end-to-end delivery and deployment pipelines
- Collaborated with Azure/AWS services based on specific project requirements
- Expertly configured and maintained networking services to facilitate the hosting of applications within VPCs and subnets
- Proficient in managing source code using Git, including branching, merging, release tagging, Git stash, Git squash, and Git rebase
- Streamlined build processes through the automation capabilities of Jenkins
- Conducted in-depth analysis of application logs to identify potential causes of issues and promptly reported errors to the development team

- Expertly administered and ensured the smooth maintenance of Jenkins master and slave machines
- Developed comprehensive Puppet manifests to facilitate installations, configurations, and deployments on client systems
- Collaborated with Ansible, crafting Ansible YAML scripts to effectively configure servers
- Possess extensive experience in Docker, encompassing the creation of Docker images, containers, and their seamless deployment to Docker Hub
- Developed comprehensive YAML files for pods and services, enabling diverse types of deployments, rollouts, and rollbacks

Nov 2017 –Jan 2022 | Capgemini

Projects: (WestPac,NAB,BHPB)

Growth Path:

System engineer  DevOps Engineer

Responsibilities:

- Demonstrated expertise in Software Configuration Management, GIT repository management, and understanding of VCS concepts
- Utilized Maven for building deployable artifacts and managed diverse environments (DEV, QA, PROD)
- Installed, configured, and maintained CI/CD tools like GIT and Jenkins. Extended tool functionality for seamless integration
- Generated Jenkins reports for metric checks and trend reports for Maven projects to ensure code quality stability
- Configured Jenkins pipeline jobs, integrating plugins for Maven build and packaging
- Deployed applications and configured environments using Ansible. Managed Ansible playbooks and utilized ad-hoc commands
- Built and monitored Cron Jobs, reported status updates regularly
- Extensive experience in Docker, including image creation, pulling from Docker Registry, and managing components
- Managed Jenkins Slave Nodes and Nodes, ensuring installations, configurations, and deployments met project requirements
- Proficient in Shell scripting for automation tasks
