PROFESSIONAL SUMMARY:

Skilled IT professional with 2+ years' IT experience, looking for a position in areas of AWS Infra and DevOps CICD Engineer

TECHNICAL COMPETENCIES:

Cloud	AWS
Containiraton	Docker, Kubernetes, ECS
Monitoring	CloudWatch, Grafana
Operating System	Linux, Ubuntu, Windows.
Configuration Management	Ansible
Versioning tool/CI-CD	GIT
Support	Incident, Problem, Change management
Code Review	SonarQube
Continuous Integration (CI) Tools	Jenkins, DevOps
Application Server	Tomcat
Scripting	Shell scripting
Database	SQL.

SKILLS SUMMARY:

DevOps:

- In-depth knowledge of DevOps management methodologies and deployment Configurations.
- Experience with Jenkins as Continuous Integration / Continuous Deployment Tool and strong expertise with Maven Build Frameworks.
- Extensively Implemented Continuous Integration and deployment using various Continuous Integration tools like Jenkins (CI/CD Pipeline creation).
- Experience using Maven as a Build Tool for the working of deployable artifacts (war & ear) from source code.
- Experience in using Cloud Watch, Nagios and ISM, Service Now, JIRA for monitoring.
- Experience in using Nexus and Artifactory Repository Managers for Maven builds.
- Deployments in production through CI/CD pipeline using Jenkins.
- Experience in building and administering high traffic production k8s/ECS clusters.
- Troubleshoot network related issue using Linux commands. Hands on route tables and NAT configurations.
- Troubleshoot application logs, yaml file, image, svc, Docker file, PV, PVC, liveness, and readiness health check.
- Creation of dashboards in Grafana for monitoring and alerting.

AWS:

- Hands on experience in AWS provisioning and good knowledge of AWS services like EC2, S3, Glacier, ELB, RDS, IAM, Route 53, VPC, Auto scaling, Cloud Front, Cloud Watch, Cloud Trail, terraform, Security Groups.
- Experience in managing infrastructure resources in cloud architecture with close coordination with various Application teams.
- Experience in working with automation tools like ANSIBLE. Experience with Configuration Management automation tool Ansible and has worked on integrating Ansible YAML Scripts.
- Using Terraform scripts automation for Aws Infrastructure: **AWS (EC2, S3, VPC, ELB, ECS).**

- Certificates handling for application and infrastructure.
- Automation using shell scripting to improve reliability, quality, and manual troubleshooting steps.
- Maintenance of IAM – User, group, roles, and policies.
- Maintenance incidents run books to implement proactive measures on reoccurring issues.
- Maintenance of maturity reports and enhancing team performance and checks over SLAs.
- Handled Incident, Change and Problem management over ServiceNow.
- Good collaboration with key stakeholders.
- Queue monitoring over RabbitMQ console.
- Maintaining snapshots via Lifecycle manager.
- Creation of EFS mount points for EC2 instances.
- Create/Managing the Elastic IPs for instances
- Create/Manage Buckets in S3 and store DB and log backup, upload images and files and setup CDN
- Setup/Managing Database on Amazon RDS. Monitoring servers through Amazon Cloud Watch, SNS
- Creating/Managing AMIs, Snapshots and Volumes Upgrade Downgrade AWS resources (CPU, Memory, EBS)

QUALIFICATIONS:

- BE From Srinivas Institute of Technology in Mangalore.

PROFESSIONAL EXPERIENCE

Working as DevOps Engineer in **viin technology** from oct 2021 to till date in Bangalore.

PROJECT SUMMARY

Project# 1:

Project title: **Tata AIG**

Client - **AIG**

Project Description:

Tata AIG General Insurance Company provides non-life insurance solutions to individuals, groups. The company was established in 2001. Tata Sons holds a 74 per cent stake in the company with American International Group Inc (AIG) holding the balance 26 per cent. AIG is the world's leading international insurance and financial services organization.

Roles & Responsibility:

- Interacted with client teams to understand client deployment requests. Coordinate with the Development, Database Administration, QA, and IT Operations teams to ensure there are no resource conflicts.
- Worked closely with Project Managers to understand a code/configuration release scope and how to confirm a release was successful.
- Worked on bucket policies, S3 storage like maintained SNS and Cloud Watch monitoring services.
- Build, manage, and continuously improved the build infrastructure for global software development engineering teams including implementation of build scripts, continuous integration infrastructure and deployment tools.
- Created JIRA issues to prioritize what's important, and stayed up to date with what's going on around the project.
- Implemented continuous integration using Jenkins and GIT.
- Administered and Engineered Jenkins for managing weekly Build, Test and Deploy chain, SVN/GIT with Dev/Test/Prod Branching Model for weekly releases.
- Well Versed with Configuring Access for inbound and outbound traffic RDS DB services, Dynamo DB tables, EBS volumes to set alarms for notifications or automated actions.
- Expert Knowledge in Bash Shell Scripting, Automation of corn Jobs.
- Implemented a GIT repository, which enables users to use to GIT.

- Developed build and deployment scripts using MAVEN as build tools in Jenkins to move from one environment to other environments.

Project# 2:

Project title: **GTAA (Greater Toronto Airports Authority)**

Role: **Cloud Engineer**

Responsibility:

- Expertise level knowledge of Amazon EC2, Amazon S3, Route 53, Amazon RDS, Amazon Elastic Load Balancing, Route53 and Cloud Watch
- Build Servers using AWS: Importing Volumes, Launching EC2, RDS, Creating Security Groups, Auto-Scaling, Load Balancers (ELBs) in the defined virtual private connection.
- Creating new EBS volumes and attaching them to EC2 instance when needed
- Backing up the EC2 instances and volumes by creating a snapshot
- Taking instance backups as Amazon Machine Image (AMI) and launching these when we need similar servers
- EBS volumes, EIPs, Snapshots, AMI's. Creating AMI images from existing instances and copy them to different regions / Availability Zones (AZs)
- Uploading data, Snapshots and EBS volumes in S3 storage while creating EC2 instance
- Assigning roles to EC2 instances to access/store data from other AWS services like S3, Cloud watch etc
- ELB – Creating Load Balance for EC2 instances within VPC, Adding Instances to make online service highly available
- Managing DNS names and Alias record in Route53 to catch up load balancer
- Creating record sets wherever customer requested
- Handling multiple requests in IAM like creating users, groups and roles
- Creating/Modifying Policies according to user's access requirement
- S3 – Working with S3 to create the buckets to store objects
- Changing permissions on buckets/objects
- Enabling events and logging on buckets to monitor bucket performance
- Managing cost on S3 buckets by using Standard, S3 In-frequent Access and Reduced Redundancy Storage
- Implementing lifecycle management to send data to Glacier then delete
- Networking VPC – Creating Instances in VPC, assigning subnets and Elastic IPs to get network, Creating NAT Gateways using Elastic IP. Creating Internet Gateway, Route Tables for subnets
- Launching NAT instance within VPC to provide internet to database/secure instances
- Monitoring AWS services like EC2, S3 and RDS through Cloud Watch
- Provisioning RDS instances
- Creating and deploying snapshots as a part of restoration process or to migrate databases from one region to another.
- Troubleshooting in case of server is not reachable or server went out of service in ELB.
