E-MAIL: gsandeepdev45@gmail.com

Summary:

3+ years of experience as an **AWS DevOps Engineer** involved in deployment of applications which includes tools like **Git, GitHub, Maven, Tomcat, Jenkins, SonarQube, Ansible, Terraform, Docker and Kubernetes** in various Linux Environments.

Professional Abilities:

- Experience in automating build and deployment workflows using **Git, Maven, SonarQube, Nexus, Jenkins, Ansible, tomcat, Terraform, Docker and Kubernetes**.
- Experience with **Linux** Environments and Scripting for **Build and Release automation**.
- Creating branches and participating in merging for Java applications using **Git**.
- Performed all necessary day-to-day **Git** support for different projects.
- Extensively worked with automation tools like **Jenkins** to Implement the end-to-end **automation**.
- Worked on set up distributed builds using **Jenkins** master/slave concepts, plugins installation, and backup using **Jenkins**.
- Implementing **CI/CD** pipeline by using **Jenkins, Maven, and Artifactory** in Linux environment.
- Working with various teams like Development, Testing, and support automated builds, using **CI & CD**.
- Troubleshooting the issues daily throughout the **Continuous Integration and Continuous Deployment**.
- Experience in using build tools like **Maven** for the building of deployable artifacts such as war & jar.
- Using **Nexus** as an Artifactory management for **Maven** developed builds.
- Experience on **Tomcat** Application Server for application deployment using **Ansible**.
- Experience in writing playbooks and creating Roles for Scalability and Reusability in **Ansible**.
- Hands-on experience in provisioning, orchestration, installing packages, services, configuration, and deployment using **Ansible**.
- Managed servers on the **Amazon Web Services (AWS)** platform instances using **Ansible** configuration management.
- Experience with infrastructure as a code tool **Terraform** to provision resources on cloud provider such as **AWS**.
- Hands on experience in **AWS** networking resources like **VPC, Subnets, Internet gateways, Route Tables, ELB and Security Groups**.

- Experience in **AWS** manage and configure the services like **EC2, S3, IAM, Elastic Load Balancer, Auto Scaling Groups, VPC** and **Security Groups**.
- Professional Experience on Containerization tool like **Docker**, Writing **Dockerfiles** for creating **Docker images**, and **containers** for different environments.
- Having Experience on deploying the end applications in **Kubernetes**.
- Used **Kubernetes** to container orchestrate the Deployment, Scaling and management of **Docker Containers**.

Academic Qualifications:

- Bachelor of science in Computer Science from Masterji Degree & PG College, Warangal.

Technical Skills:

Version Control/SCM	Git, GitHub
Operating Systems	Linux, Windows
Cloud Computing Services	AWS Cloud
Build Tools	Maven
Continuous Integration / Continuous Deployment Tools	Jenkins, ArgoCD
Configuration Management Tools	Ansible
Web server	Apache Tomcat
Container Tools	Docker
Container orchestration Tools	Kubernetes
Infrastructure As a Code Tool	Terraform
Code Quality Tools	SonarQube
Scripting	Shell Scripting
Monitoring Tools	Prometheus & Grafana

Professional Experience:

- Working as an **AWS DevOps Engineer** at **Concentrix Technologies Pvt Ltd**. Since February 2020 to till date.

PROJECT 2:

Client	Everly Well
Role	DevOps Engineer
Project Duration	May 2021 to till date

Responsibilities:

- Worked on version control system like a Git, involved in creating Git branches and tags.
- Configured and deployed Git repositories with branching tagging merge requests.
- Build scripts using Maven build tool to generate the artifacts in Jenkins.
- Creating and maintaining the Jenkins slaves for distribution of loads.
- Performing both manual and automation builds using Maven and Jenkins.
- Automate the build process using Jenkins jobs.
- Used Jenkins to implement Continuous Integration and Continuous deployment (CI/CD).
- Worked on integration Artifactory tools like Nexus to Jenkins for storing artifacts like jar/war.
- Worked on static code analysis tool like SonarQube for scanning bugs and vulnerabilities.
- Worked on Ansible and involved in writing Ansible, Ansible playbook.
- Worked on Containerization tool like Docker, writing Dockerfiles, and creating Docker Images out of Dockerfile.
- Building and managing Docker images for containerized applications.
- Involved in Creating Docker containers out of images by tagging and pushing the images and worked on the infrastructure using Docker containerization.
- Worked on Docker container, attaching to a running container, removing images, and managing containers.
- Provisioning of Kubernetes cluster verification of clusters monitoring and providing support for user issues.

Environment: Git, GitHub, Maven, Jenkins, SonarQube, Docker, Kubernetes, Prometheus, Grafana, AWS EC2.

PROJECT 1:

Project	BioVeta Health
Role	DevOps Engineer
Project Duration	March 2020 to May 2021

Responsibilities:

- Maintained Git repositories.
- Automated Weekly releases, supporting dev, QA teams.
- Designed CI/CD processes in the context of a Jenkins orchestration, including the usage of automated build, test/QA, and deployment tools.
- Integrated Jenkins with build tool and stored war files in Artifactory.
- Created Jenkins jobs, both freestyle and pipeline jobs for building and deploying code.
- Work with Development Teams and Testing Team to establish a build schedule, execute the builds, and troubleshoot build failures.
- Configuring, installing, and managing Tomcat servers for web applications.
- Integrating with DevOps tools like Git and Ansible.
- Using Configuration management tool Ansible for configuring multiple servers.
- Involved in creating Aws cloud resources using Terraform such as EC2, VPC, Subnets, Internet gateways, Route Tables, ALB and Security Groups.
- Worked on Containerization tool like Docker, writing Dockerfiles, and creating Docker Images out of them.
- Created Docker container images by tagging and pushing the images and worked on the infrastructure using Docker containerization.
- Worked on Docker container, attaching to a running container, removing images, and managing containers.
- Involved in deploying applications on Kubernetes using Jenkins.
- Configured and managed different types of AWS components like EC2, VPC, Auto Scaling, ELB.

Environment: Git, GitHub, Maven, Jenkins, Nexus, Tomcat, Ansible, Terraform, Docker, Kubernetes, Linux, Shell, Aws, Ec2, Autoscaling, VPC, ELB.
