Summary

I would like to obtain a challenging position in IT where my technical and interpersonal skills can be utilized to benefit both me and Organization. I can describe myself as **AWS DevOps Engineer** who is technically sound with **Linux** commands and have completed several IT trainings such as **DevOps, AWS Sys Admin**.

Skills

Programming Languages: **Python , Linux(Ubuntu, RHEL)**

Microservices: **Docker, Kubernetes**

Database: **MySQL, MongoDB, Oracle**

Ticketing Tool: **Jira**

IAC: **Ansible, Terraform**

Tools: **Git, GitHub, Maven**

AWS Services : **EC2, S3, VPC, Route53, RDS, ELB, ASG,ECS, EKS, ELK, RDS, Lambda, Cloud Watch, Cloud Front, Security Groups, NACLs, TCP/IP**

Static code Analysis Tool: **SonarQube**

Web Server: **Tomcat, Nginx**

Artifactory Manager: **Nexus3**

Monitoring Tool: **Grafana, Nagios**

CI/CD: **Jenkins**

Education

June 2017 - August 2021

Chalapathi Institute of Engineering and Technology, Guntur -*BTech*

Bachelor's degree in Electronics and Communication Engineering, CIET, 2021

Experience

November 2021 - November 2022

Infosys, Bengaluru – Systems Engineer (DevOps)

Project: JGS SUMMIT

Roles and Responsibilities:

- Creating New Repository and branches in Git.
- Experience with Version Control Systems like GIT setting up and configuring, Branching and merging through Git.
- Good hands on using Maven as build tool for building and deploying Artifacts (Jar, War) packages from the source code.
- Build using visual studio build systems and archive the artifacts after the successful builds.
- Configured the new Jenkins job using the pipeline.
- Entire CI/CD developed using Jenkin pipeline concept by using Master and Slave Configuration.
- Pushes the Docker images to the internal Docker registry.
- Used jfrog repository manager to store the results and artifacts of the build results for validation.
- Integrated Jenkins with other DevOps tools like Git, Maven.
- Experienced in creating and managing Docker containers and creating custom Docker images using Docker files.
- Building Docker images and pushed those images to Docker registry & Amazon Elastic Container Registry (ECR).
- Setup and configuring jobs in continuous integration tools Jenkins for project builds.
- Monitoring and responding to problems reported on dashboard and Email .
- Have used WinSCP to copy the files from remote to local.
- Created users and groups in Linux with Sudo access.
- Taking care of servers, which includes document servers, and restarting them immediately whenever there is a problem in server.
- Used JIRA monitoring tool to track and troubleshoot issues.
- Attending status meetings and SCRUM on daily basis.
