Profile Summary

- Having 2 years of Experience in **Automation and Manual testing**.
- Knowledge of Software Testing Life Cycle (**STLC/SDLC**).
- Experience of **SAP** and **WORKSOFT Certify** Automation.
- Good Experience over **Agile development, waterfall Model** etc.
- Experience in **Automating** scripts in **protractor-cucumber, Selenium, WDIO, Node.js** and **Cypress with TS framework**.
- Experience on **Selenium web Driver** automation.
- Experience in testing **web** applications **across different browsers** and **devices**
- Knowledge of **Maven, Jenkins, Protractor and Cucumber Framework** implementations.
- Hands-on experience of **CI/CD** pipeline configuration and maintenance.
- Knowledge of API testing using **Postman, SoapUI, or REST-assured**
- Coordinate with peer scrum teams and technology leaders to ensure excellent **cross-component & cross-scrum** QA strategy and coverage for platform & software feature-sets.
- Excellent **troubleshooting and problem-solving skills** associated with service provider, **enterprise and carrier software solutions** in general.
- Experience in development environments – **GIT, Jenkins, Grafana**.
- Strong desire and abilities to work as part of a **team** or **independently** with less supervision.
- Good Understanding of **Web application** and **Microservice solution** architecture
- Familiarity with **virtualization tools** like **Docker** or **Vagrant** for **test environment** simulation

Aya Healthcare -Qualitest Client

8 Months
Remote

 **Automation Engineer** Jan 2023 - Aug 2023 · 0 yr 8mos

Project: Aya Healthcare platform Development

Aya Healthcare is the leading nursing platform in the US, where a candidate can get connected to thousands of Hospital facilities to work within. I was part of Software development and quality assurance and automation scripting using **Cypress with Typescript framework**.

Key Responsibilities:

- Understanding the core business requirement and details of the project.
- Automating the testcases approved by the Product Owner ,team lead and manager as per priority.
- Collaborating with the US client team in order to get certain clarifications on the requirements and proceed with testing independently.
- Helping the team to understand the new features.

 **Verification Engineer** April 2022- Dec 2022 · 0 yrs 9 mos

1.Project: Remote Proposition Management (RPM) (Aug-2022 – Dec 2022)

Migration of on premises to the cloud, technologies Including **IoT HUB, associated devices**. Software compatibility and scalability with Agile development happened hand in hand. Testing the same and providing quality values to the release. For which the new ways of handling these devices via software solutions were designed, programmed and regressively tested.

Key Responsibilities:

- Understanding the core business requirement or changes and acting on the same with detail.
- Designing Test cases for new Features and executing the same.
- Writing the Automation test scripts for the features not automated and running the build.
- Developed and/or executed implementations according to project plans and priorities.
- Tracking the automation builds in Azure cloud.
- Registering new devices and checking the relevant supported features, connectivity and compatibility.
- Bug reporting and verifying reported bugs fixed by developers and informing same to the scrum master.
- Performing the regression testing and verifying existing features not impacted by new features added.
- Worked independently and imparted good technical communication skills to collaborate in a team.

2. Project: Philips Remote Servicing Regionalization (April-2022 to Aug 22)

Regionalization based project, for controlling remote devices (healthcare devices). I worked on China regionalization project.

Key Responsibilities:

- Working hand in hand with developers to understand the requirements and deploying strategy.
- Verify the various changes deployed and keep track of different software versions and respective changes that happened.
- Checking the device connectivity to the centralized platform and the regional platform and comparing the time of responses.
- Verifying the core features working as per expected and executing the testcases for proof coverage.
- Automating the necessary features and manually testing the rest of the features that are out of automation scope.
- Developed and/or executed implementations according to project plans and priorities.
- Documenting the test report for each sprint and demo the same as Doneness meeting.

Qualitest India

2 Years, 1 Months
Bangalore ,Karnataka, India

Software Test Engineer | Automation Engineer

Aug 2021 - Present

1. Project: QT Recog web Application. (Feb 2022- April 22):

It was a Microservices based platform to assign and appreciate employees as Kudus. It was equipped with auto email and invitation to different events, collaboration activities and much more.

2. Project: Quali Couch Website. (Dec 2021- Jan 22):

A platform used to assign new courses for Trainee and existing employees. Packed with the features like progress tracker, history, improvements and a centralized tracking feature for admin to check the records and progress of each individual.

Key Roles and Responsibility:

- Main task was to understand user requirements and automate test cases to check the functionality as per the requirements.
- First written test cases for the "Quali Coach" Webpage as per the Trainee and admin requirements.
- Also Written testcases for "QT Recog" portal with necessary permissions.
- Then automated those test cases using Java Selenium and TestNG framework.
- Also created the defect report in proper format, for the test cases that are executed and mentioned the severity and priorities for those defects.
- Had good hands-on experience on Selenium tool.
- Focused on handling the exceptions with proper messages.

CERTIFICATIONS AND TRAINING:

- Cypress with Typescript -Udemy
- WorkSoft Certify Business Process Automation
- Java with Selenium Automation -Udemy
- WDIO framework with BDD -Automation Hub
- Agile software development- Udemy
- ISTQB certified- Nizam Academy
- Rest Assured API Testing - Udemy
- Cucumber-Protractor BDD testing - Udemy
- Jira, Kanban and Trello. - Udemy
- C/C++ programming Certification from NIELIT Srinagar.
- CCNA (Routing & Switching) Certification from NIELIT Srinagar.
- Cross Platform Application Development.
- FTCP from Skill India.
- IOT from FICE India
