PROJECTS

E-Commerce Website Using HTML and CSS

https://chandramohan1451.github.io/Web-project/

This project aims to create a fundamental e-commerce website using HTML and CSS.

- The primary goal of this project is to develop a proof-of-concept e-commerce platform, focusing on core features like product browsing and checkout.
- Visually appealing presentation of products with images, descriptions, and pricing.
- Product Categories: Organization of products into different categories for easy navigation.

Solid Waste Management System for Smart Cities

Solid waste management system using IoT technology for optimized waste management.

- Developed a solid waste management system to address urban waste challenges.
- The system utilizes an ESP32 microcontroller, ultrasonic sensor, Blynk IoT app and a buzzer alert system to monitor waste levels in real-time. By leveraging IoT technology, the system enables remote monitoring, efficient waste collection routes, and timely alerts for optimized waste management.
