SUMMARY

Data Engineer with 3.5 plus years of expertise in data discovery, migrating and creating new optimized data pipelines to load data from Data Lake to Data Warehouse for analysis and decision-making purpose using Snowflake, DBT&Airflow , Astronomer, SQL, Python, AWS Services, Oracle SQL Developer.

WORK EXPERIENCE

Data Engineer, TCS - Hyderabad, India

August 2021 – Present

- Good Hands-on in Snowflake technology (Warehouse) with strong expertise in SQL, including complex queries.
- Developed data pipelines (using DBT and traditional method) and transformations in snowflake for different layers (Stage, RDV, BDV, Presentation later).
- Hands-on experience with Snowflake utilities such as SnowSQL, SnowPipe, Stages, Tasks, Streams, Time travel, Optimizer, Metadata Manager, Data Sharing, and Stored Procedures.
- Embraced emerging technologies such as DBT Build Tool to automate Airflow job implementations, streamlining data workflows and improving overall system reliability.
- Responsible for the data load to Snowflake Staging from AWS S3 bucket.
- Developed and implemented Stored Procedures for existing DataStage jobs.
- Experience in handling Data warehousing - OLTP, OLAP, Dimensions, Fact Tables
- Leveraged Airflow to design and schedule automated task, ensuring seamless execution of stored procedures in Snowflake.
- Good proficiency in programming like Python and Implemented AWS Lambdas for data validations and seamless integration with Snowflake.
- Experience in designing and building data pipelines using AWS technologies like MWAA, S3, and Athena, worked in developing and optimization of Amazon MWAA jobs.
- Spearheaded automation initiatives by creating Power Automate flows for efficient file transfer, enhancing operational efficiency.
- Worked in PII and non PII data for data retention treatments and for writing Data quality rules to check quality of data.
- Worked in GitHub and Jenkins for code deployment.
- Responsible for writing SQL unit testcases to the tables for checking data issues.
- Worked as a Data analyst for data discovery team to discover data in order to migrate legacy Excel reports to snowflake cloud MSTR reports for analytics purpose.
- Guided and mentored juniors improving team performance and growth.
- Deployed AWS services like S3, roles, Lambdas and different services using with IaC and CI/CD tools like Terraform.

PROJECTS

TATA Consultancy Services (Project: **SAINSBURYS**-UK Based Retail Client)

Role: Data Engineer (Snowflake Developer)

Duration: From December 2022 to till date (Worked on 3 different squads within in the same project)

Description: This project is to migrate the Reports/Data from traditional data warehouses like oracle, SQL server etc... to Snowflake Cloud Data warehouse's for UK's second largest retail client.

Technologies Involved: AWS Services, Snowflake, DBT, Astronomer, SQL, Python, Abinitio, GitHub, MicroStrategy.

TATA Consultancy Services (Project: **FIS**-Banking)

Role: Data Engineer (Snowflake Developer)

Duration: From August 2021 to December 2022

Description: This project is to migrate the DataStage Jobs/Data from traditional data warehouses Oracle to Snowflake Cloud Data warehouse's for US's Banking client.

Technologies Involved: AWS Services, Snowflake, SQL, Python, Airflow, GitHub.

SKILLS

Languages: SQL, Python, SnowSQL, Linux.

Certifications:

- AWS CLOUD PRACTITIONER
- SNOWPRO CORE
- PYTHON
- REDHAT

Technologies: AWS Services, Snowflake, DBT, DataStage, Jira, GitHub, Airflow.

EDUCATION

Aditya College Of Engineering And Technology

Bachelor of Technology

July 2021

8.1 CGPA
