Objective

Results-driven Trainee DevOps Engineer with over 9 months of experience in designing, implementing, and maintaining scalable infrastructure and CI/CD pipelines. Proficient in cloud technologies, configuration management, containerization, and automation tools. Seeking a challenging role to leverage my expertise in optimizing deployment processes, enhancing system performance, and driving continuous integration and delivery.

Skills and Technologies

Cloud Technologies : AWS [EC2, S3, EBS, VPC, ELB, ASG, IAM, Route53, Cloud Watch, Lambda, Networking]
Operating System : Linux, Ubuntu, Windows
Version Control System : Git, GitHub, Git Bash,
CI/CD Tools : Jenkins
Container and Orchestration Tools: Docker, Kubernetes
Configuration Management Tool: Ansible
Automation Tools : Maven
Infrastructure as Code : Terraform [Beginner]
Monitoring Tools : Prometheus and Grafana
Infrastructure Architect : Designing VPC, and Route53
Scripting Language : Bash, YAML, Shell, and Python.
Agile Methodology : Scrum
Other tools known : Jira, Visual Studio Code

Experience

MICRO-DEGREE [Internship], Bangalore, Karnataka

Aug 2024 – Till Date

Projects:

1. Three-Tier WordPress web application hosting.

Tools Used: Cloud (AWS), EC2, S3, RDS, ELB, Auto-Scaling, Cloud Watch, VPC.

I set up a WordPress application by creating an instance and configuring the Apache server on it. I also set up a MySQL database server and, to ensure high availability, created a load balancer and an auto-scaling group.

2. Automation of CICD pipeline for Django web application.

Tools Used: Cloud (AWS), Git, GitHub, Jenkins, Docker, Docker Hub and KUBERNETES(K8S).

I have implemented a CI/CD pipeline for a Django web application using Jenkins. This pipeline pulls code from GitHub, creates Docker images, and pushes the images to Docker Hub, all while leveraging a Kubernetes cluster architecture for deployment.

3. Creating a S3 bucket on AWS and setting up a static website using terraform.

Tools Used: Terraform, Cloud (AWS), S3 Bucket

This project involved developing and deploying a static website on AWS S3 using Terraform to automate the infrastructure provisioning process. The project included creating an S3 bucket, configuring it for static website hosting, uploading website files, enabling public access, and testing the website using the S3 endpoint.

Projects:**1. Ready Upgrade****Client:** Harley Davidson

- Collaborated on a team project using Git and GitHub, implementing feature branches and pull requests to enhance code quality and streamline development.
- Generate the build file for the given code using the Jenkins tools.
- Executing the Sanity test cases manually for deferent condition
- Testing the application to different scenarios and taking and reading those logs to find out the defects [Gal monitor and normal].
- Find the root cause of the defect and fix the defect.

Education

Completed Bachelor of Engineering at Malnad College of Engineering, Hassan, Karnataka.

Certification

- AWS Cloud Practitioner Essentials Amazon Web Services, Coursera
