Ananya H Doddagoudar

SUMMARY

- Immediately Available. Completed Notice period on Feb 6th 2024.
- Worked in Qualitest pvt. Ltd from Oct 25th 2021- Feb 6th 2024.
- Overall 2.3 years of experience in Manual, Network Testing and Firmware Testing at Qualitest.
- Experience in using firmware testing tools like STM32CubeIDE, Hercules, STM32CubeProgrammer.
- Experience in testing communication protocols using UART, SPI, BLE, RS232, RS485, Modbus.
- Good knowledge on C.
- Experience in Network testing tools like VNC viewer, Wireshark traces, PCRF Traces.
- Familiar with Testing concepts & Process (Life Cycle).
- Knowledge of Functional and Non-Functional Testing concepts and agile methodologies.
- Good Knowledge on Defect Life cycle and well versed in identifying and logging the defects using JIRA.
- Knowledge Automation testing in Selenium tool.

TECHNICAL SKILLS

Testing: Experienced in Network, Manual, Firmware Testing, preparing Test cases according to requirement, Executing Test cases accordingly, preparing TER(Test exit report).

Languages: C.

Tools/frameworks: Selenium, Microsoft SQL, ALM, Citrix Receiver, VNC Viewer, Wireshark, Eclipse, Load generator, NetAct, STM 32, Communication protocols- RS 232, ModBus, RS 485, UART, SPI.

PROFESSIONAL EXPERIENCE

Qualitest India pvt. Ltd

Designation: Engineer.

Key roles and responsibility:

- BAU Core Integration testing, performs Integration and Regression testing for production fixes, new configuration and or commercial changes that are implemented. Erlang nodes are in-house systems developed from Erlang Open Telecom Platform
- Involved in network testing
- Understanding user requirements and testing the functionality as per the requirements.
- Written various test cases accordingly and tested with all the pre-conditions in order to meet the requirements.
- Created a Pit entry report and TER(Test Exit Report) By considering the results of the executed test cases.

TRAINING

- Trained on Fundamentals of Testing
- Trained on ISTQB testing concepts
- Trained on Java, Java Selenium, SQL

PROJECT

PROJECT: E-SIM NETWORK TESTING (Nov 24th 2021- June 2022)

Description- Client is a major telecom service provider in UK. We have tested the e-sim functionality against different network types and validated the e-sim activation end-to-end process.

Roles & responsibilities–

- Reviewing and understanding business requirements.
- Created and executed Test Cases per Requirements and verifying the traces.
- Identifying and reporting defects using defect tracking tool.
- Performed Functional, Regression, Network Testing.
- Attending standup calls, sharing daily status updates to lead.

PROJECT: BLE BASED ASSET TRACKING SYSTEM (Aug 2022 – Feb 6th 2024)

Description:

Project involves testing BLE-based Asset tracking devices used in logistics for tracking environmental parameters such as Temperature, Humidity, Light, Pressure, Shock, GPS tracking and sending notifications to the users when device thresholds are triggered. It involves testing the device and **Firmware** where we used to flash the firmware on to the devices using **STM32 Cube Programmer, STM32 Cube IDE, Hercules tools** and test for it's the functionality, stability, and compatibility of the firmware installed on the devices.

Responsibilities:

- Involved in validation of firmware's response to various commands which includes testing the device's behavior and its accuracy with respect to the given commands.
- Understanding specifications of modules.
- Creating Test suites for each hardware module in the product (unit test)
- Define, develop, and implement firmware validation tests.
- Defect reporting by using defect tracking tool.
- Performed firmware upgrade/downgrade Testing.
- Performed communication protocol (UART, SPI, BLE) testing across Modules.
- Analyze the defect or root cause of any deviations.
- Attending standup and defect triage calls.
- Involved in testing the device's behavior when specific commands are configured, such as adjusting Device reporting frequency, changing thresholds, or modifying other settings.
- Involved in verification of how the firmware handles various error scenarios, such as low battery levels, signal loss, or firmware corruption.
- Involved in testing the devices to ensure they can gracefully handle and recover from these situations without affecting their overall functionality.
- Perform regression tests to ensure that new firmware updates or changes do not introduce any issues or regressions in previously tested functionality.
- Involved in reporting and tracking bugs.

- Involved in thoroughly testing the devices and firmware, ensuring the quality, reliability, and effectiveness of the BLE-based devices used in logistics.

EDUCATION

Bachelor of Engineering

GM Institute of Technology

Dept. of Electronics and Communication Engineering.

CGPA: 8.2/10.00
