SUMMARY

Highly skilled python developer with three years of experience developing and maintaining complex web applications. Expertise in writing custom python code, collaborating with other developers, integrating third-party services and APIs. Achieved significant increases in application functionality, reducing development time and improving overall code quality.

EXPERIENCE

Software Engineer

Cavisson Systems. Jul 2021 - Jan 2024

Job Profile - Python Developer

Responsibilities

- Developed efficient algorithms to improve application performance.
- Conducted regular code refactoring to enhance readability and reduce technical debt.
- Identified and resolved critical bugs in a timely manner of the application.
- Collaborated with teams to gather requirements and prioritize feature development.
- Optimized database queries resulting in increase in application performance.

Projects

Shopping cart using Django

- Utilized Python, HTML, and CSS to design and implement intuitive user interfaces.
- Developed user-friendly interfaces for applications using Python, HTML and CSS.
- Linked templates to functions in views, ensuring seamless integration of frontend design with backend functionality for enhanced user experience.
- Applied Django ORM to establish robust data relationships within tables enhancing database accessibility and data retrieval processes.
- **Environment:** python, django, HTML, CSS, sql, json, pycharm.

Netdiagnostics - Applications performance monitoring tool

- Employed the logging module for developing and testing applications, ensuring accurate error tracking and efficient debugging workflows.
- Leveraged ctypes library to call C/C++ functions within Python.
- Demonstrated proficiency in creating a Flask application with MySQL database integration, facilitating effective CRUD operations for data handling.
- Configured and served a Flask application using uWSGI and Nginx servers.
- Utilized exception handling technique to effectively manage errors in the application.
- **Environment** : python, flask, JSON, HTML, CSS, sql, mysql.

Twitter sentiment analysis using Python

- WDeveloped a Python script utilizing the Twitter API to extract and analyze tweets.
- Applied Natural Language Processing (NLP) techniques for tokenization, lemmatization, and vectorization to preprocess and analyze data effectively.
- Designed and implemented a Naive Bayes algorithm for sentiment analysis accurately determining the polarity of data for insightful decision-making.
- **Environment:** python, jupyter notebook, APIs.

Freelance Python Developer

Remote

February 2024 - September 2024

- Worked with Python scripts looking for bugs.
- Created django ecommerce web application and fixed the reproduced bugs.
- Designed and implemented flask application and deployed it on Heroku.

SKILLS

- Python
- django rest framework
- django
- flask
- coding
- data structures and algorithms
- aws
- mysql
- git
- linux
- numpy
- HTML and CSS

EDUCATION

Bachelor of Technology, CSE

NATIONAL INSTITUTE OF TECHNOLOGY MIZORAM Jul 2017 - Jun 2021

PERSONAL INFORMATION

Date Of Birth : 13th May 1999

Nationality : India

Gender : Male

Languages Known : English, Hindi
