SKILLS

Programming Languages and Frameworks: C#, ASP.NET, .NET Core, .NET MVC, VB.NET, SQL, C, C++, Java, Python, JavaScript

Databases: Oracle, MySQL, PostgreSQL

Cloud: Microsoft Azure

Tools and Software: MS SQL Server, Blazor, Visual Studio, WEB APIs, REST APIs, ServiceNow, Visual Studio, MVC

Frontend Stack: HTML, CSS/SASS/SCSS, TypeScript, ReactJS, ReactTS, Angular, jQuery, Redux, Axios

PROFESSIONAL EXPERIENCE

DXC TECHNOLOGY, Noida – Associate Professional Software Engineer (6 Months Internship)

Dec 2020 – Jun 2022

- Developed many application pages in Suncor CMS with the help of WEB APIs, Webservices, .NET Framework, JavaScript, MVC and SQL Server.
- Implemented external and internal services for connecting the Suncor CMS to other modules of Suncor and also sync database.
- Implemented XSD files in complete application by obtaining the data from database, converting to XML format and storing again.
- Expertise in automating the database jobs. Transformed a lot of complex manual jobs to one click automated jobs using stored procedures thereby reducing the chance of human error.
- Migrated the entire Suncor CMS Platform to Azure cloud with the development team by investigating feasibilities, performing POCs, Demos with stakeholders, designing migration strategies, and monitoring after migration.
- Excellent debugging skills, resolved numerous critical production issues rapidly and monitored the fixes.
- Responsible for planning, estimation and development of new features, service requests, critical tickets and more.
- Proposing and defined business requirements suiting towards the best interest of the product by understanding the concept and ideology of the product, identifying challenges and risks.
- Gained solid expertise in building webpages with .NET framework, HTML, CSS, JavaScript, Angular and more.
- Gained expertise in managing SQL database with Oracle, MySQL, SQL Server.
- Learnt about automation in database using stored procedures, automated jobs and CRON Jobs and implemented the same.
- Trained, helped and ramped up several new joiners in improving technical competence, writing production level code, debugging skills, code environment setup and team engagement.

PROJECTS

- Suncor (CMS)** – Internal application of Suncor Project providing the user with functionalities process card transactions. Integrated with various other applications and syncs data with the help of internal and external services, stored procedures, scheduled jobs, CRON jobs and more. The tech stack for different services includes C#, .NET, JavaScript, Python, Stored Procedures, SFTP for client file transfer and storage in DB, REST APIs and WEB APIs for data transfer and external communication.
- Avatarify** – Reads the face of the user and studies the emotions, thereby generating a real time avatar of the user in that emotion. The project used deep learning algorithms.
- Barbie with Brains** – A companion for children whom kids can talk and ask questions and the software will answer the questions in easy-to-understand language. The software uses Speech to Text processing to understand the human speech, NLP to extract meaning and Text to Speech processing to respond back to the users.
- News Reader** – A web crawler-based news reading app which fetches latest news from top websites and extracts voice output with the help of Text to Speech processing.
- TNP Website** – Fully function website for TNP cell of the college (HMR). Built with WordPress and available plugins.

EDUCATION

HMR Institute of Technology and Management, GGSIPU

BTech (C.S.E) Aug 2017 – Jul 2021

Percentage – 83%

SOFT SKILLS

- Reading
- Technical Writing
- Cooking
- Singing and Dancing
