PROFESSIONAL SUMMARY

Dynamic and results-driven **Data Analyst** with **5.6** years of comprehensive experience in leveraging advanced analytical tools and methodologies to extract actionable insights and drive strategic decision-making. Proficient in SQL and Excel for data manipulation and analysis. Skilled in crafting compelling visualizations and dashboards using Tableau and Power BI, facilitating clear communication of complex insights to stakeholders. A quick learner with strong problem-solving abilities and a commitment to continuous growth and development in the field of Data Analytics.

EDUCATION

Bachelor of Commerce

K H Govt Degree college. (D.BR. A O U)

TECHNICAL AND ANALYTICAL SKILLS

- | | | |
|--------------|----------------------|-------------------------|
| • SQL Server | • Excel | • Business Intelligence |
| • Tableau | • Data Analytics | • Problem-Solving |
| • Power Bi | • Financial Planning | • Data Reporting |
| | | • Data Visualization |

EXPERIENCE

Consultant – Sionic (Davies)

June 2022 – Mar 2024

- Gathered requirements from business users and stakeholders to understand their reporting needs and objectives, translating them into intuitive and user-friendly dashboard designs.
- Created and maintained interactive dashboards and reports using Tableau and Power Bi to visualize key performance indicators (KPIs) and trends, facilitating data-driven decision-making for stakeholders across departments.
- Conducted in-depth analysis of sales and revenue data for both B2B and B2C segments using Tableau and Power Bi identifying trends, opportunities, and potential areas for growth.
- Created visualizations to track sales performance by product, region, customer segment and other relevant dimensions, enabling stakeholders to make data-driven decisions to drive revenue growth.
- Delivered accurate financial forecasts through rigorous analysis of historical trends, market conditions, and competitor data.
- Presented findings and recommendations to executive leadership and key stakeholders, driving data-driven decision-making and strategic initiatives.
- Implemented automation processes for repetitive tasks, resulting in a **30%** reduction in manual workload, streamlining data analysis and reporting tasks.
- Standardized data collection procedures across departments, ensuring consistent data quality and enabling seamless integration of new datasets.
- Led cross-functional teams for success of projects, ensuring timely delivery and client satisfaction.
- Identified data discrepancies and inconsistencies through rigorous data audits, ensuring the highest level of data integrity for Business-critical decisions.
- Generated ad-hoc reports upon request, supporting various stakeholders needs for timely information access.

Tableau Developer – S.G. Analytics

May 2018 - April 2022

- Processed large volumes of data to understand trends, identifying and finding solutions.
- Designed, developed, tested and maintained Tableau and Power Bi reports based on user requirements.
- Incorporated data visualizations, charts, and graphs into PowerPoint presentations to illustrate key metrics, trends, and insights effectively.
- Utilized Tableau server and Power Bi service to publish and share the reports with business users.
- Automated the scheduling of dashboards and reports within Tableau Server and Power Bi service.
- Implemented row-level security and site-level permissions on data and demonstrated an understanding of application security layer models.
- Connecting to different data connections to load the data from multiple sources like relational databases, flat files into SQL Server etc.
- Usage of various graphs like Heat Map, Tree Map, Pie chart, Area chart, Bar graphs, Dual axis, Blended axis and Dual combination graph and prepared custom charts like Donut, waterfall, Pareto, Lollipop charts.
- Blended and Joined data from multiple databases into one report by selecting primary data and secondary data sources from each database for data validation.

PROJECTS

VOLUME DASHBOARD

Client: HSBC

- Collaborating with team members for process updates and improvements.
- Involved in designing, developing, testing, publishing, maintaining, and supporting Tableau applications.
- Fetching the data from multiple data sources.
- Validating the dashboards for data accuracy.
- Conducts code reviews to ensure code quality, consistency, and best practices adherence.
- Prepared detailed functional specifications, design models, and system workflow

Digital Procurement & Analytics

Client: Mondelez

- Spearheaded the extraction and transformation of data from SQL Server and Excel sheets into Power BI enhancing visualizations with custom visuals.
- Utilized DAX functions to derive actionable insights and created scheduled refresh for dashboards.
- Published reports in the PBI Service and implemented Role Based Security (RLS) for user access.
- Performed data cleansing, transformation, and integration to create a robust and accurate data foundation.
- Developed interactive and visually appealing dashboards and reports using Power BI.
- Enhanced data accuracy and decision-making capabilities through advanced DAX functions and custom visualizations.
- Implemented advanced DAX functions and custom visualizations, resulting in a 90% increase in data accuracy and decision-making capabilities, as evidenced by positive feedback from stakeholders and management.
- Spearheaded the development of various dashboards, including IEC level CAS Dashboard.
- Procurement Dashboard, and IT tracker Dashboard, showcasing expertise in creating impactful visualizations and reports that drive informed decision-making.

Customer Volume & Service Performance Analysis

Client: DTDC

- Development of dashboards for various end users across multiple teams in the organization.
- Gather requirements for new dashboards develop visualizations and deliver the output in a timed interval.
- Perform ad hoc changes on existing dashboards to incorporate new data points.
- Participate in Tableau grooming sessions to help end users resolve queries on Tableau desktop.
- Help users by interacting with them on one-to-one basis to build their visualizations.
- To help users optimize their reports to give good performance
- Validate the data in the reports by cross checking at data base level and maintaining data integrity.
- Integrating Tableau workbooks with live data base after building visualizations using test data.
- Attending meetings with business users on weekly sprint meetings to demo and discuss about the work being executed.
- Used diverse data sources such as databases, excel files, CSV files, share point lists, and using Tableau server as a data source to build reports.
- Creating stories on Kanban board and updating them on timely manner there by effectively working in an agile environment.
- Optimize existing extracts following Tableau best practices.
