| Phone: +91 9390236566

| Place: Bengaluru

CARRER OBJECTIVE:

Seeking a responsible position to utilize my skills and abilities in an organization where opportunity exists for innovative and challenging professionals.

EXPERIENCE SUMMARY:

- I have 8 Months of Experience in L&T Technology Services as Embedded Software Developer. Having exposure to Embedded Development, Good knowledge on C & C++.
- I have 1 year of Internship Experience in Radar Technical Centre India Pvt. Ltd as Embedded Software Engineer.

TECHNICAL SKILLS:

Programming Language	C, C++, Python, Linux, Embedded C, Data Structures
Tools used	Keil-ide, Proteus, Canoe/CAN Analyzer, Git & GitHub
Communication Protocols	I2C, SPI, CAN, RS-232, RS-422, RS-485
Device Driver	UART, I2C, SPI & CAN
Micro-Controllers	LPC2148/29, Arduino Nano, NodeMCU

WORK SUMMARY:

- Having good knowledge in C Programming.
- Having knowledge in C++ (11 & 14 standards) & STL Concepts.
- Knowledge in Embedded C.
- Having knowledge in Linux & OS.
- Knowledge on Networking (TCP/IP & UDP).
- Basic Knowledge in Python.
- Knowledge on Git, GitHub & JIRA.

EDUCATION DETAILS:

B. Tech	Electrical and Electronics Engineering, Completed in 2023 (7.7 CGPA)
Diploma	Electrical and Electronics Engineering, Completed in 2020 (78.86%)
SSC	Secondary School Certificate, Completed in 2017 (7.8 CGPA)

EXPERIENCE:

Project 1:

Project Name	Automotive Emergency Braking for ADAS
Description	Automotive Emergency Braking (AEB) systems are designed to autonomously detect potential collisions and apply the brakes to prevent or mitigate the impact. The development of the ECU that governs AEB is based on theoretical principles drawn from control systems, sensor fusion, and safety-critical software engineering. AEB ECU development combines control systems, sensor fusion, functional safety, and real-time computing
Role & Contribution	Role: Embedded Software Developer Responsibilities: ➤ Studied the design and writing the requirement specifications ➤ Developed the code for Required Environment using C & C++
Technologies	Knowledge on C Knowledge on C++ Knowledge on GIT & GITHUB Knowledge on SDLC
Tools	Linux (Ubuntu)
Key Achievements	Learnt on developing a code using C & C++ using ubuntu

Project 2:

Project Name	IOT Based Smart Parking Management System
Description	An IOT Based Smart Parking System reduces the traffic and enhancing the parking efficiency. Utilizing sensors, it enables the real-time monitoring of parking spaces and allowing drivers to locate available spots through the mobile app. The main objective of the project is to provide the simple parking system to the vehicles and reduce the traffic on the roads.
Technologies	Knowledge on Communication Protocols like UART, I2C Knowledge on C Language & Embedded C
Components	Arduino Nano, Node MCU, IR Sensors, LCD Display, Servo Motor, Voltage Regulator

Project 3:

Project Name	Smart Irrigation Watering System Using IOT
Description	In the recent times practiced by people may result in huge wastage of water. The Concept of robotized farming has been developed. The Smart irrigation System has wide scope to automate the complete irrigation system. It can be real time observation system. By using IOT and Machine Learning technologies we can reduce the human involvement, conserve water & increase plant growth.
Technologies	Knowledge on C Knowledge on Embedded C
Components	Arduino Uno, Node MCU, Soil Sensor, DHT11 Sensor, Motor, Battery, Relay

PERSONAL ATTRIBUTES:

- Quick learning ability
- Adaptive to changes
- Leadership Qualities

DECLARATION:

I hereby declare that the above details are correct and true to the best of my knowledge and belief.

Place: Bengaluru
