SKILLS

CI/CD Tool: Jenkins

Containerization & Orchestration: Docker, Kubernetes

Cloud Platforms: AWS (EC2, S3, IAM, ECR, EKS, ECS, VPC)

Infrastructure as Code (IaC): Terraform, Ansible

Monitoring & Logging: Prometheus, Grafana, Cloudwatch

Scripting & Automation: Python, Shell Scripting

Version Control: Git, GitHub

Operating Systems: Linux (Ubuntu), Windows

Agile Tools: Jira, Confluence

Security: SonarQube

EXPERIENCE

Software Engineer | Aarmec Technologies | Bangalore

October 2020 – Present

- Streamlined infrastructure management with Terraform, achieving a 30% decrease in deployment times across the environment.
- Enhanced CI/CD pipelines using Jenkins, GitHub CI/CD, and Docker, improving deployment efficiency and minimizing errors.
- Fostered integration of infrastructure-as-code principles, boosting software reliability by 40%.
- Optimized application scalability, reliability and resource utilization by 40% through Docker and Kubernetes..
- Utilized Prometheus and Grafana for performance monitoring, cutting downtime by 25% with proactive alerting.
- Implemented security practices including RBAC and vulnerability scanning to fortify DevOps workflows.
- Provided insights on team and pipeline performance through regular reporting.

-
- Mentored and guided a team of DevOps interns, encouraging continuous learning and improvement.
 - Promoted transparency with progress tracking agile tools like Jira and Kanban.
 - Facilitated daily stand-up (scrum) meetings to address progress, challenges, and objectives.

Corporate coach | Speechify | Abu Dhabi - May 2017 - March 2020

Partner Operation Specialist | VMware | Bangalore - May 2011 - March 2012

Senior Relationship Manager | TCS | Chennai - December 2008 – December 2010

CSO | Allsec Technologies Ltd. | Chennai - July 2007- November 2008

EDUCATION

Bachelor of Technology in Computer Science : Chennai

Executive MBA : Bangalore

CERTIFICATIONS

- **AWS Certified Solutions Architect Associate : 2024 - 2027**
- **Certified Scrum Master**

PROJECTS

Roadrolls Project : Travel Website

- Utilized Terraform Cloud for remote state management and collaboration, resulting in **100%** accuracy in infrastructure tracking across environments.
- Administered Terraform Cloud with delegated admin duties, managing **10+** workspaces.
- Identified and resolved infrastructure drift in **5+** instances, achieving **100%** compliance with configuration standards.
- Automated the deployment of **15+** microservices using Kubernetes manifests and Jenkins CI/CD pipelines, reducing deployment time by **50%**.
- Configured Horizontal Pod Autoscalers (HPA) to automatically scale applications by **50%** during high-traffic periods, optimizing resource usage.

- Diagnosed and resolved **30+** system issues using `kubectl logs` and `kubectl describe`, improving system stability by **40%**.
- Leveraged AWS ECR for secure storage of **200+** container images and AWS EKS for orchestration, enabling **99.9%** uptime for containerized applications.
- Configured appropriate IAM roles and permissions for **50+** EC2 instances running EKS worker nodes, ensuring **100%** security compliance.
- Improved security with fine-grained IAM and RBAC configurations.
- Launched **3** VPCs, **6** subnets, **10+** security groups, and **20+** EC2 instances for a microservices architecture.
- Configured and maintained object storage solutions using S3, for secure and scalable data storage.
- Isolated **3** environments (dev, QA, prod) with custom configurations per environment, ensuring **100%** environment segregation.
- Addressed EKS cluster scaling issues, ensuring **0%** downtime during traffic spikes with smooth horizontal scaling.
- A highly available multi-region infrastructure with automatic failover via Route 53, ensuring near-zero downtime.
- Configured security groups to restrict access, including allowing SSH only from specific IPs, improving security by **70%**.
- Created Jenkins multibranch pipelines for **2** branches ('prod' and 'main'), with integrated unit and integration tests, reducing code errors by **60%**.
- Maintained back-up and recovery solutions using etcd for Kubernetes workloads.
- Implemented continuous delivery pipelines, pushing **20+** Docker images to AWS ECR and triggering deployments to **5** Kubernetes clusters in AWS EKS.
- A 50% reduction in deployment time due to optimized Docker images and automated pipelines.
- 99.9% uptime for the application by leveraging Kubernetes' self-healing and auto-scaling features.
- Worked on CloudTrail, Prometheus, Grafana for continuous monitoring of **10+** cloud resources and user activities, improving compliance by **30%**.

AWARDS

- Best performer award for consistently exceeding the performance.
- 100% on time deliverables.
