## Summary:

8+ years of experience in C++ with expertise in Design, Development, Debug and testing long-term real-world software with working knowledge of operating systems, compiler optimizations and other software concepts like Data structures, Algorithms, Socket programming and Multithreading, fully conversant with System Development Life Cycle. Well versed with Agile and Scrum with knowledge of Source control management Systems.

## Skills:

Software Design & Development, C, C++, Data structures, Algorithms, Operating systems, Git, Computer networking and Linux.

## Experience:

- **Senior Member Of Technical Staff, Oracle** (Dec 2021 – Present)
  - Designed and developed tool from scratch to check and repair ASM disk header fields. This is being appreciated and used widely across dev preventing unintentional corrupt.
  - Worked on Implementation of filtering solution using ebpf to validate write I/O requests to Oracle ASM disks for evolving Linux kernel.
  - Implemented solution to reduce [Oracle AFD](#) disk label time by 60%.
  - Added changes to optimize CLI of odaadmcli commands related to OAK Storage for [ODA](#) Product.
- **Software Engineer, Intel** (Feb 2018 – Nov 2021)
  - Responsible for Design, Development and maintaining IP based simulating compiler tool.
  - Worked on implementation of operating systems and computer architecture concepts.
  - Responsible for Code debugging, Log analysis and providing fixes on customer issues.
  - Worked on analysis of low-level system code including assembly as part of code debug.
- **Software Engineer, Microchip Technology Inc** (July 2017 – Jan 2018)
  - Responsible for enabling voicemail feature for VOIP phones using open source solution [Asterisk](#) to reduce IT cost.
- **Graduate Technical Intern, Intel** (July 2016 – June 2017)
  - Developed and maintained [RIL](#) based [Phone simulator](#) tool which serves as unit test setup cum cellular modem simulator.
  - Worked on Telephony stack, Cellular Scenarios, Log collection, Debugging, Flashing and Validation on Android and [Yocto](#) platforms.
- **Intern, Google** (Google Summer of code)

Worked as a developer for [Gluon](#) Open source project as part of [Google summer of code](#) Where my work involved Integrating of [Bullet](#) library to Gluon (2D open-source game engine) and ensuring smooth functioning of Game Engine components.

**Academic Qualification:**

|                                                                                 |                                         |
|---------------------------------------------------------------------------------|-----------------------------------------|
| M.Tech - Computer Network Engineering<br>(First class with Distinction)         | BMS College of Engineering, Bangalore.  |
| B.E – Electronics & Communication Engineering<br>(First class with Distinction) | PES Institute of Technology, Bangalore. |

**Additional information:**

- Have been recognized for outstanding technical accomplishments throughout career.
- Have been an active open-source contributor for [KDE Open sourceProject](#).
- Founder member of UNIX club and Open-Source Community, PESIT.
- Qualified among top10 hacks at Bangalore Hackathon and TechCrunch Hackathon.
- Have been active member of Computer Networking club, BMSCE and have completed CCNA Exploration course successfully via the same.
- Drove placement season as student placement coordinator of Information Science department, BMSCE.
