TECHNICAL SKILLS

Languages: Python (pandas, NLTK, scikit-learn, TensorFlow, PyTorch), SQL, C#, JavaScript, HTML/CSS, Java

Tools: Tableau, Power BI, Excel (Macros, Power Query, VLOOKUP), Google Cloud, BigQuery, Jira

Operating Systems & Databases: PostgreSQL, MySQL, Linux, Windows

Core Concepts: Machine Learning, Natural Language Processing (NLP), Data Structures, Predictive Analytics, Data Analysis, OOPs, DevOps, Scripting

Testing Expertise: Manual and Automation, Functional Testing, Test Cases

Project Management: Agile, Scrum, Time Management

EXPERIENCE

Philips

Bangalore

Data Analyst as Intern

Aug 2023 - Jun 2024

- Automated data manipulation and reporting tasks using Macros in MS Excel, significantly improving efficiency and reducing manual work.
- Extracted and processed raw data from Google Sheets using SQL (QUERY function), ensuring data integrity and readiness for analysis.
- Conducted data pre-processing tasks, including cleaning, formatting, and validating datasets to maintain high accuracy and consistency.
- Worked extensively with Google BigQuery on Google Cloud to analyze large datasets efficiently.
- Designed and built dashboards to visualize medical scanner usage (e.g., CT, NM, MR) across multiple hospitals, delivering actionable insights to stakeholders.
- Engineered and integrated a solution within the .NET framework to automatically detect and flag pull requests (PRs) that have been open for more than 14 days. This ensured that inactive PRs were appropriately marked as stale, prompting maintainers for action or closure.
- Developed an SMTP-based email notification system that integrates with GitHub's API, sending personalized reminders to developers who forget to delete the branches post-merge.

PROJECTS

Philips Operations Dashboard | Power BI, Excel, DAX, SQL, PowerQuery

Jan 2024 - Jun 2024

- Developed interactive PowerBI dashboard to visualize and analyze Scanners(CT, NM, MR) operational metrics.
- Enhanced decision-making and operational efficiency through real-time data insights.

GitHub Stale PR Check Implementation | C Sharp, Git, API, .Net framework

Aug 2024 - Dec 2024

- Devised a solution to monitor pull requests (PRs) in a GitHub repository, specifically identifying PRs opened in the last 14 days.
- Engineered an automated email notification system to alert users when a user doesn't delete branches after closing a PR that reduced unaddressed branches by 80%.
- Facilitated 3+ APIs in the .NET Framework to gather data, process PR information, and send notifications.

Cardiovascular Disease Prediction | Python, Random Forest, Linear Regression

Aug 2021 - Jan 2022

- Built a predictive model for cardiovascular disease by using the data from the kaggle, developed entirely in Google Colab for efficient experimentation and collaboration.
- Tested multiple machine learning approaches, including linear regression and classification models, identifying random forest as the most accurate with a prediction accuracy of 98%.
- Focused on creating a cost-effective and reliable solution, achieving a 95% reliability threshold to support early detection and reduce potential misdiagnoses.

EDUCATION

Vellore Institute of Technology

Jul 2019 – Aug 2024

Master of Computer Science Engineering

CGPA - 8.32

Narayana Junior College

Jun 2017 – Apr 2019

Intermediate Board

CGPA - 9.78

V.S. St. Johns. Hr. Sec. School

Jun 2016 – Jun 2017

CBSE Board

CGPA - 8.8
