Experience - Fresher | Location - Bangalore

Projects

NSS Management System

ASP.NET Web Application

C#, .Net Framework, HTML5, CSS, Javascript & SQL Server

- Developed a web application for managing NSS activities assigned to candidates, who have registered in the web app. The candidate can also view the activities assigned by the leader.
- The Leader or the other higher official of NSS will assign the activities to the candidates to the location specified.

Railway Management System

Windows Forms Application

Visual Basic, .NET Framework & SQL Server

- Created multiple windows forms which acts as GUI for the user to interact with the application.
- Registration of new user, looking for train details like seat availability, price, source and destination of the train that customer had booked and making of payment.
- Admin stores details of customers and verifies the payment of customers.

0/1 Knapsack problem

Simulation project

C programming

- It is a simulation project which is developed by using header file graphics.h in C programming.
- A simple solution is to consider all subsets of items and calculate the total weight and profit of all subsets.
- It Consider the only subsets whose total weight is smaller than W. From all such subsets, pick the subset with maximum profit.
