Giridih, India 815301

Skills

- C++
- Python
- Pandas
- Numpy
- MySQL
- Power BI
- Selenium
- lxml
- Data Extraction
- BeautifulSoup
- Excel

Education And Training

06/2023

Bachelor Of Engineering:

Computer Science , 6.82 CGPA

Chandigarh University

Mohali,Punjab

04/2019

Higher Secondary:

PCM , 85.2%

BNS DAV PUBLIC SCHOOL

GIRIDIH JHARKHAND

Harsh Raj

Summary

Highly motivated and technically adept recent graduate with a strong foundation in software development. Possesses hands-on experience from comprehensive training in various programming languages and development tools. Known for strong problem-solving abilities, attention to detail, and a quick learning curve.

Experience

DXC TECHNOLOGY - Mainframe Programmer(Training & Full Time)

Remote, India

12/2023 - Current

- **Technical Skills:** Gained expertise in COBOL, JCL, DB2, and CICS, mastering essential mainframe development tools and languages.
- **Application Development:** Experienced in developing, debugging, and maintaining mainframe applications, ensuring robust and efficient code.
- **Systems Understanding:** Acquired a solid understanding of mainframe architecture, batch processing, and database management, crucial for handling enterprise-level systems.

Projects

1- E-commerce Sales Analytics with Python, SQL, and Power BI

Objective:

The goal of this project is to automate the data extraction, transformation, and loading (ETL) of sales data for an e-commerce company and to create interactive dashboards in Looker for sales and inventory insights. The project provides a clear picture of daily sales, product performance, and inventory management for the operations team.

Tech Stack:

Python: Used for data extraction, transformation, and loading.

SQL: Used for querying the database and performing necessary aggregations and joins.

Power BI: A BI tool for building data models and creating visualizations and dashboards.

2- Amazon Customers Review Analysis

In this project I aims to gather and analyze customer reviews from amazon website. By scraping the reviews, we can perform sentiment analysis to understand customer satisfaction and identify trends

Python: The programming language used for the project.

Beautiful Soup: A library for parsing HTML and extracting data from web pages.

Pandas: A library for data manipulation and analysis.
