

Harshit S

Undergraduate B.Tech Computer Science and Engineering - 2024

harshitskumar02@gmail.com | 9148970299 | Bangalore, India | LinkedIn | Github

PROFILE

Recent graduate with a Bachelor of Technology in Computer Science and Engineering, passionate about Data Science and Analytics. Have a solid foundation and understanding in **Data Science, Data Analytics, Machine Learning, Natural Language Processing, Deep Learning and Convolutional Neural networks** committed to ongoing learning and applying advanced data science techniques to drive growth. Eager to contribute to a dynamic data analyst team.

SKILLS

Python | Data Visualization | Machine Learning | Deep Learning | Selenium | Tableau | MySQL | AWS Cloud | NLP | TensorFlow | Microsoft Office[Word, Excel, PowerPoint] | PowerBI | Stream Lit | HTML | JavaScript | MongoDB

PROJECTS

Car Dekho Vehicle Recommendation System

Key Skills: Data Cleaning, EDA, Recommendation Engine

- Built Car Dekho Vehicle Price Recommendation System and used collaborative filtering technique
- Deployed to help the customer to get **recommendation based on the price, specifications and features** of cars
- **Extracted real-time data for 10,000 cars** from Car Dekho and engineered a data pipeline to transform unstructured information into a structured dataset. Subsequently, **derived 25 additional features** to enrich data for analysis.
- Developed a machine learning recommendation model that achieved a **r2_score of 0.88**, effectively suggesting **highly relevant items to 88% of users** within the top 10 recommendations and deployed in cloud

RedBus Data Engineering

Key Skills: Selenium, EDA, SQL, stream lit,

- Developed a automate data extractor using selenium to extract the travel aggregators data from redbus.in
- Aimed to **provide bus route options, price and operating aggregators details** for users searching for travel options.
- Created interactive data visualization dashboard using Stream lit to display the pricing and route details
- Stored the data collected from redbus into SQL Database for easier updating for future records.

Illuminating Insights for Global Electronics

Key Skills: Python, Data Cleaning, Data Visualization, SQL, Tableau

- Performed in-depth analysis of products, sales, distribution performance using sales data, products data, distribution data to identify key statistics and relations
- Stored the datasets into SQL and creating relations between each dataset using **SQL joins**.
- **Collected and analyzed over 500 products** statistics from sales database
- Developed an interactive data visualization dashboard incorporating statistics to comprehensively analyze and compare performance trends of products across multiple markets, gender distribution, customer segmentation, sales, profits from each market and providing actionable insights for strategic decision-making.

AI-based E-Commerce website with Chatbot

Key Skills: Python, HTML, SQL

- Designed an e-commerce website with user-friendly interfaces for users and system admin.
- Implemented a robust database for user and product details.
- Streamlined one-click checkout with bill generation.
- Integrated an AI chatbot for customer inquiries.

Video chat using WebRTC with in-built sign language detection

Key Skills: OpenCV, media pipe, Python, EDA, TensorFlow

- Developed a WebRTC-based prototype for video chat with integrated sign language identification.
- Aids hearing-impaired and speech-impaired users.
- Utilized **TensorFlow's object detection** and **Opencv** for hand sign recognition.

Character Co-occurrence Network Analysis

Key Skills: Python, EDA, Text preprocessing

- Applied network analysis to enhance understanding of character relationships in complex novels and book series.
- Mapped characters as nodes and interactions as edges.
- Employed link prediction for insightful relationship anticipation.

Intelligent Parking Management System using Image Processing

Key Skills: Python, OpenCV

- Developed an innovative Smart Parking System.
- Employed CCTV cameras and OpenCV's image processing for real-time parking spot detection.
- Simplified parking management and alleviated traffic congestion.

PROFESSIONAL EXPERIENCE

Project Intern

May 2023 – Jul 2023 | Bangalore

SmartInternz

- Performed Data cleaning and EDA
- Built a Recommendation System using machine learning techniques
- Serialized the model into a pickle file
- Created a dashboard using flask

EDUCATION

IIT-M Advanced Programming Professional & Master Data Science

May 2024 – Sep 2024 | Chennai

IIT-M GUVI

Bachelor of Technology, Computer Science and Engineering

Jun 2020 – Jul 2024 | Vellore

Vellore Institute of Technology

Pre-University, PCMC

Jun 2018 – Jul 2020 | Bangalore

KMWA PU College

High School, PCMC

Jun 2008 – Jan 2018 | Bangalore

Sri Vani International School

CERTIFICATES

- Google Data Analytics Professional Certificate, Coursera
- AWS Certified Cloud Practitioner, AWS
- Data Analysis[SQL, Tableau, Excel], Udemy

Publications

- Checking the Truthfulness of News Channels using NLP Techniques, International Conference - RV Institute of Technology and Management'23
